JURISDICTIONAL STATEMENT

Appellant Opticurrent, LLC (hereafter, “Opticurrent”) filed this action for patent infringement against Power Integrations, Inc. (hereafter, “POWI”) and its customer, Mouser Electronics, in the Eastern District of Texas on April 1, 2016. (Appx162-168). That court severed and stayed the case against Mouser, and transferred the case against POWI to the Northern District of California. (Appx413-422, Appx561-562). After trial, the District Court entered judgment on the jury verdict on March 4, 2019. (Appx2679). After timely post-trial motions that tolled the period for appeal, the District Court issued rulings disposing of all of them on June 5, 2019. (Appx97-142). After a July 3, 2019 order that quantified prejudgment interest and disposed of additional matters (Appx143-144), Opticurrent filed its Notice of Appeal on July 5, 2019. This appeal is timely under FRAP 4, the District Court had jurisdiction under 28 U.S.C. § 1331, and this Court has jurisdiction under 28 U.S.C. § 1291.

ISSUES PRESENTED

1. Whether the District Court erred to apply the presumption against extraterritoriality by reducing a royalty base by 82% (limiting it to sales

made in the United States), when the royalty base used by the jury already adjusted global sales downward to match only those amounts imported into the United States?

2. Whether the District Court erred to dismiss a counterclaim of invalidity without prejudice, after the counterclaim had already been abandoned and merged into the judgment?

STATEMENT OF THE CASE

In proceedings below, Opticurrent won a patent infringement jury trial. The jury awarded \$6.67 million in damages against POWI. (Appx2676-2678). Opticurrent appeals because the District Court reduced that jury award by 82%, misapplying the presumption against extraterritoriality. (Appx102-107). The District Court, after judgment, also purported to dismiss invalidity counterclaims “without prejudice,” even though POWI had abandoned those counterclaims. (Appx143). Opticurrent appeals this aspect as well, because those counterclaims had merged into the judgment by the time of the District Court’s action.

A. The Patent-in-Suit

United States Patent Number 6,958,623 is entitled “THREE TERMINAL NONINVERTING TRANSISTOR SWITCH.” (Appx145-161). James Congdon, named inventor on multiple patents, invented the ’623 patent. Opticurrent is the

successor in title to Mr. Congdon.¹ (Appx4656-4676, Appx4687-4689, Appx4690-4692). In trial testimony, Mr. Congdon explained that, as an individual, he would have been unable to seek redress for POWI's infringement of his patent without the financial backing and assistance of Opticurrent and its owners. (Appx3906-3908, Tr. at 507:12-509:5).²

B. Procedural History Through the End of Discovery, Including Production of the Comparable QBar License

Opticurrent filed this action for infringement against POWI and its customer, Mouser Electronics, in the Eastern District of Texas on April 1, 2016. (Appx162-168). That court severed and stayed the case against Mouser, and transferred the case against POWI to the Northern District of California. (Appx413-422, Appx561-562). Before transfer, the Texas court construed certain claim terms. (Appx454-478). After transfer, fact and expert discovery concluded, and the California court entertained summary judgment and *Daubert* motions. (Appx4962-4970, at Dkt. Nos. 103, 122, 124, 132, 142, 143, 174). In relevant rulings, the District Court reaffirmed the Texas court's claim constructions. (Appx2465, Tr. at 33:8-22; Appx3566-3567, Tr. at 168:9-169:18).

¹ As reflected in Jury Instruction No. 23 "Stipulations of Fact", Opticurrent is the owner of all rights, title, and interest in the '623 Patent. (Appx2651).

Among the pretrial rulings, the District Court excluded Opticurrent's damages expert, primarily on grounds that he should have considered Mr. Congdon (and not Opticurrent) as the party to the relevant hypothetical negotiation. (Appx1947-1975). The District Court denied Opticurrent's request to amend and resubmit that expert report. (Appx1983-1989, Appx2018-2050, Appx4796-4798). However, the District Court did observe that no damages expert was necessary in this case, since licensing evidence could go before the jury to assist them in calculating damages. (Appx2034-2035, Tr. at 17:19-18:6; Appx2148-2149, Tr. at 7:21-8:10; Appx4797). Specifically, the District Court referred to the QBar License and the testimony of Opticurrent's expert Regan Zane.

Although it did not name the patent-in-suit, the QBar License did involve a prior patented invention by the same inventor in the same field, resulting from a negotiation with a chip maker having a foreign presence. (Appx3898-3900, Tr. at 499:25-501:24). That license was between inventor James Congdon and the Canadian company QBar Tech. Inc. (Appx4332-4336). It granted rights under Mr. Congdon's U.S. Patent No. 5,134,323, plus three then-pending patent applications (one each in Canada, Japan and the European Union) to make, use and sell "QBAR Switches" as defined in the agreement as "Three-Terminal Noninverting Transistor Switch as disclosed, claimed, and covered by U.S. Patent #5,134,323." (Appx4332). The only issued patent named in that license was the United States patent.

(Appx4332). Substantial trial testimony explained the '323 patent as a predecessor of Mr. Congdon's '623 patent invention. (Appx3697-3698, Tr. at 298:22-299:6; Appx3704, Tr. at 305:8-17; Appx3788, Tr. at 389:7-10). The written description in the '623 patent discusses the '323 patent as prior art, over which the '623 patent made substantial improvements. (Appx153).

The QBar License required payment of 2-3% of “Net Sales,” depending on exclusivity. (Appx4333). The license defined “Net Sales” as, in its entirety, “the sum of Licensee’s and Sublicensee’s invoiced sales of QBAR Switches, less discounts and allowances in accordance with accepted industry norms.” (Appx4332).

Consequently, the QBar License contained the following terms in exchange for a license under solely a United States issued patent:

- Rights granted for “worldwide” activities;
- A royalty base that included sales from Canada to anywhere in the world (including non-United States purchasers);
- A 2-3% royalty on such Net Sales, depending on exclusivity.

C. Evidence Elicited at Trial

After the District Court denied various summary judgment motions, and issued rulings to define which products and product families were properly within suit, a four day trial commenced on February 15, 2019. As explained in more detail

in Section IV, below, POWI abandoned its invalidity defense before trial. The only liability issue POWI attempted to address in its rebuttal case was noninfringement.

Trial evidence included testimony that POWI designed 100% of the accused devices in the United States. (Appx4178, Tr. at 778:6-16; Appx4182-4183, Tr. at 782:4-783:5). It also included testimony that POWI designed all of these devices to comply with United States specifications. (Appx4182-4183, Tr. at 782:4-783:5). Total global sales revenues from the accused products, through a certain point in time before trial, were about \$666 million. (Appx4163-4164, Tr. at 763:1-764:7; Appx4780-4790). Trial evidence also included unrebutted testimony about what proportion of such globally-sold devices ended up being imported into the United States (*i.e.*, one-third). (Appx4166-4167, Tr. at 766:9-767:7; Appx4182-4183, Tr. at 782:22-783:5). Consistently, during trial and in closing argument, Opticurrent asked the jury to award a reasonable royalty based on the comparable QBar License, albeit with a royalty base adjusted downward to one-third of global sales, not all of them. (Appx4253-4257, Tr. at 853:7-857:19; Appx4298, Tr. at 898:3-9).

Although POWI in rebuttal had one witness state that 6% of its global sales were in the United States, such testimony began and ended there. (Appx4179, Tr. at 779:2-9). In other words, POWI made no request for the jury to consider or weigh this disembodied 6% factor when rendering its verdict. During trial, including during

closing argument, POWI declined to provide the jury with any alternative damages calculation. (Appx4286, Tr. at 886:3-13; Appx4294, Tr. at 894:9-16).

D. The Jury Verdict

The jury rendered its verdict based on instructions that, in relevant part, were agreed. The jury instructions explained the *Georgia Pacific* factors for a reasonable royalty, laid the burden of proof with Opticurrent, and required the jury to limit the damages to “the value attributable to the infringing features of the product, and no more.” (Appx2655-2669). The instructions also allowed the jury to consider “one or more” licenses “if it helps to establish the value that is attributable to the patented invention as distinct from the value of other features of [POWI’s] products.” (Appx2666).

After deliberating, the jury returned a unanimous verdict of direct infringement, consistent with the evidence and Opticurrent’s closing argument. The jury found infringement, both literally and under the doctrine of equivalents, but no inducement infringement. (Appx2676-2678). On the verdict form, the jury awarded a reasonable royalty of 3% of \$222,216,159.00—an award equal to \$6,666,484.77. (Appx2677). The jury thus factored “worldwide” sales into its damages award as the royalty base, but adjusted downward (as Opticurrent had requested) to limit this base solely to product imported into the United States.

E. Post-Trial Rulings

In post-trial rulings, the District Court granted POWI's renewed Rule 50(b) motion for judgment as a matter of law to reduce the jury award by 82%. (Appx97-144). The District Court did so by reducing the royalty base to 6% (rather than one-third) of global sales. (Appx108). As explained in more detail later, the District Court misbelieved that Federal Circuit authority only enabled consideration of products imported into the United States for the royalty base when there has been inducement of infringement, not found here by the jury. (Appx105-107). Accordingly, the District Court believed that only the 6% of global sales that are in the United States may factor into the direct infringement royalty base. In all other material respects, the District Court rejected POWI's liability and damages motions, permitting the verdict to stand.

This appeal followed.

SUMMARY OF THE ARGUMENT

The District Court incorrectly reduced the jury award by 82%. It should have left the jury award untouched. Substantial evidence permitted consideration of “worldwide” sales as a preliminary royalty base, as under the QBar License. Then, the final royalty base should be limited (under this Court’s analysis of extraterritoriality) by adjusting the preliminary amount downward to reflect the

quantity of devices that actually reach United States soil. The jury’s award already did precisely that.

The District Court also mistakenly dismissed the abandoned invalidity counterclaim “without prejudice.” The District Court should have recognized that this counterclaim already merged into the existing judgment as unsuccessful. This Court should vacate and remand with instructions to dismiss “with prejudice,” to prevent POWI’s ability to re-bring its lost invalidity claim, and vex Opticurrent with it, despite Opticurrent’s *res judicata* rights.

ARGUMENT

I. STANDARDS OF REVIEW

This Court applies the regional court of appeals standard of review to procedural issues. *Intel Corp. & Dell Inc. v. CSIRO*, 455 F.3d 1364, 1369 (Fed. Cir. 2006). This includes judgement as a matter of law (JMOL) decisions, which this Court reviews *de novo*. *Apple, Inc. v. Samsung Elecs. Co., Ltd.*, 839 F.3d 1034, (Fed. Cir. 2016) (holding on *de novo* review that grant of JMOL in the Ninth Circuit is proper when the evidence permits only one reasonable conclusion and the conclusion is contrary to that of the jury).

In the Ninth Circuit, a party seeking judgment as a matter of law has a “very high” standard to meet. *Costa v. Desert Palace*, 29 F.3d 838, 859 (9th Cir. 2002). A district court properly grants judgment as a matter of law against a party only if there

is no legally sufficient basis for a reasonable jury to find for that party on that issue. *See Jorgensen v. Cassidy*, 320 F.3d 906, 917 (9th Cir. 2003); *see also Anderson v. Liberty Lobby, Inc.*, 477 U.S. 242, 250 (1986) (judgment as a matter of law may be granted only where “there can be but one reasonable conclusion as to the verdict”); *Pavao v. Pagay*, 307 F.3d 915, 918 (9th Cir. 2002) (the jury’s verdict must be upheld if there is “evidence adequate to support the jury’s conclusion, even if it is also possible to draw a contrary conclusion.”). The court “must not weigh the evidence, but should simply ask whether the plaintiff has presented sufficient evidence to support the jury’s conclusion.” *Harper v. City of L.A.*, 533 F.3d 1010, 1021 (9th Cir. 2008). The court must also “view the evidence in light most favorable to the nonmoving party, draw all reasonable inferences in the favor of the non-mover, and disregard all evidence favorable to the moving party that the jury is not required to believe.” *Id.*

One extraordinary aspect of the District Court’s ruling is that it granted a full-blown JMOL on the topic of damages, choosing a damages award to replace that of the jury. Usually a court only adjusts a damages award by ruling on a remittitur / conditional new trial motion (which POWI did not bring, thus depriving Opticurrent of the option to select a new trial). Review of damages calculations is particularly deferential in the Ninth Circuit, where the verdict is upheld unless it is “clearly” not supported by the evidence, is “based only on speculation or guesswork,” or is

“grossly excessive or monstrous.” *United States v. CB&I Constructors, Inc.*, 685 F.3d 827, 839 (9th Cir. 2012); *Biotec Biologische Naturverpackungen GmbH & Co. v. Biocorp, Inc.*, 249 F.3d 1341, 1355 (Fed. Cir. 2001) (same, applying Ninth Circuit standard).

Separately, the Ninth Circuit appears to treat appeals over whether a “without prejudice” dismissal should have been “with prejudice” under the abuse of discretion standard. *Michaud v. State Farm Ins.*, No. 96-17212, 1998 U.S. App. LEXIS 17252, at *3 (9th Cir. July 24, 1998). However, this Court vacates “without prejudice” dismissals without regard to discretion, remanding with instructions to dismiss “with prejudice,” when the lower court’s ruling arose from a misbelief about the legal capacity of the litigant to re-bring the claim in the future. *Cordis Corp. v. Boston Sci. Corp.*, 561 F.3d 1319, 1339-40 (Fed. Cir. 2009).

II. THE DISTRICT COURT ERRED TO GRANT JUDGMENT AS A MATTER OF LAW TO REDUCE THE JURY’S DAMAGE AWARD BY 82%

The District Court erred as a matter of law to grant JMOL on damages. The first subsection below explains the substantial evidence supporting the use of POWI’s global sales within the royalty base, as a factual matter in view of the law of patent damages. The next subsection will then show how the jury’s actual award (using only one-third of that royalty base) properly and already took into account whatever reduction was needed from the larger royalty base to comply with the

presumption against extraterritoriality of the United States patent laws. The final subsection distinguishes two of the District Court's cited decisions. This Court should therefore reverse and reinstate the jury award.

A. Substantial Evidence Supported Using All POWI Worldwide Sales in the Royalty Base, Prior to Any Extraterritoriality Adjustment

The Patent Act provides: “the court shall award [the patent owner] damages adequate to compensate for the infringement but in no event less than a reasonable royalty for the use made of the invention by the infringer.” 35 U.S.C. § 284. Such damages must include *full* compensation. *Mentor Graphics Corp. v. EVE-USA, Inc.*, 851 F.3d 1275, 1283-84 (Fed. Cir. 2017). Full compensation is defined as “the difference between [the patent owner’s] pecuniary condition after the infringement, and what his condition would have been if the infringement had not occurred.” *Aro Mfg. Co. v. Convertible Top Replacement Co.*, 377 U.S. 476, 507 (1964) (plurality opinion) (quoting *Yale Lock Mfg. Co. v. Sargent*, 117 U.S. 536, 552 (1886)); *see also WesternGeco LLC v. ION GeoPhysical Corp.*, 138 S. Ct. 2129, 2137 (2018) (same).

Accordingly, the jury had to determine what Opticurrent’s “pecuniary condition” would have been had the infringement not occurred. For this task, the jury had evidence in the form of the QBar License. (Appx4332-4336). When a claimant does not seek or cannot prove lost profits, the “damage which the patentee has suffered in such a case is the non-payment of the price which he has put on his license, with interest, and no more.” *Seymour v. McCormick*, 57 U.S. 480, 489-90

(1850). The law permits use of “non-payment of the [license] price” as a damages framework whether the patentee advances an “established royalty” or a “reasonable royalty” theory. “Where the licenses employed are sufficiently comparable, [valuing the asserted patent based on a comparable license] is typically reliable because the parties are constrained by the market’s actual valuation of the patent.” *CSIRO v. Cisco Sys.*, 809 F.3d 1295, 1303 (Fed. Cir. 2015); *cf. Mobil Oil Corp. v. Amoco Chems. Corp.*, 915 F. Supp. 1333, 1353 (D. Del. 1994) (“Courts and commentators alike have recognized that the royalties received by the patentee for the licensing of the patents in suit is the ‘most influential factor’ in determining a reasonable royalty.”).

The evidence at trial supported the hypothetical negotiation and the jury’s finding of a reasonable royalty. Under *CSIRO*, the District Court allowed Opticurrent to present a damages model based on a comparable license with consideration given to the “differences in the technologies and economic circumstances of the contracting parties.” *See* 809 F.3d at 1303. The QBar License was before the jury and entered into evidence without objection. (Appx3830, Tr., at 431:7-16). This license set forth a framework upon which the jury could base its royalty determination.

Although it did not name the patent-in-suit, the QBar License did involve a prior patented invention by the same inventor in the same field, resulting from a

negotiation with a switch maker having a foreign presence. (Appx3898-3900, Tr. at 499:25-501:24). That license was between inventor James Congdon and the Canadian company QBar Tech. Inc. (Appx4332-4336). It granted rights under Mr. Congdon's U.S. Patent No. 5,134,323, plus three then-pending patent applications (one each in Canada, Japan and the European Union) to make, use and sell "QBAR Switches" as defined in the agreement as "Three-Terminal Noninverting Transistor Switch as disclosed, claimed, and covered by U.S. Patent #5,134,323." (Appx4332). The only issued patent named in that license was the United States patent. (Appx4332). Substantial trial testimony explained the '323 patent as a predecessor Congdon invention. (Appx3697-3698, Tr. at 298:22-299:6; Appx3704, Tr. at 305:8-17; Appx3788, Tr. at 389:7-10; Appx3892-3893, Tr. at 493:17-494:7; Appx3908, Tr. at 509:14-19). Indeed, the written description in the patent-in-suit incorporates by reference the '323 patent and thereafter discusses the '323 patent as prior art, over which the patent-in-suit made substantial improvements. (Appx153).

The jury heard testimony from Dr. Regan Zane, Opticurrent's technical expert, regarding the comparability of the technology at issue in the QBar License. (Appx3697-3698, Tr. at 298:22-299:6; Appx3704, Tr. at 305:8-17; Appx3788, Tr. at 389:7-10). In particular, Dr. Zane explained how the '323 patent relates to an inferior technology and the '623 patent serves as an improvement. Mr. Congdon

further supported this testimony. (Appx3892-3893, Tr. at 493:17-494:7; Appx3908, Tr. at 509:14-19).

POWI never challenged Dr. Zane under *Daubert*, and his qualifications were beyond question. As the jury heard, Dr. Zane was qualified to discuss the technical merits of the '623 patent and how its improvement was critically important to any company seeking to eek value out of practicing the '323 patent. In addition to having a Ph.D. in electrical engineering, Dr. Zane spent his professional career focusing on power electronics. His experience includes work at General Electric's corporate research and development center, as well as authoring numerous publications, books, and patents involving power electronics. Dr. Zane currently works as a full professor at Utah State University, where he teaches power electronics to future engineers and leads the development of the University's Sustainable Electrified Transportation Center. (Appx3663-3664, Tr. at 264:23-265:11; Appx3665-3670, Tr. at 266:8-271:13).

For "worldwide" rights under the inferior '323 patent, the QBar License required payment of 2-3% of "Net Sales," depending on exclusivity. (Appx4333). The license defined "Net Sales" as, in its entirety, "the sum of Licensee's and Sublicensee's invoiced sales of QBAR Switches, less discounts and allowances in accordance with accepted industry norms." (Appx4332). In other words, "Net Sales"

did not involve subtractions or reductions for activities occurring solely outside the United States, and did not limit itself to occurrences in the United States at all.

The record also contained (and the jury also heard) evidence of economic comparability. Mr. Congdon testified that QBar Tech. was a Canadian company manufacturing and selling '323 patent covered products to a wide range of power supply customers that including the likes of Ford Motor Company, IBM, the Massachusetts Institute of Technology and Welch-Allyn. (Appx3900-3901, Tr. at 501:5-10, 502:16-21). QBar Tech. entered into the license with Mr. Congdon and paid royalties based on actual global sales. This is evidence of economic comparability that the jury could consider when assessing the royalty rate and royalty base POWI would have negotiated to receive a license for manufacturing and selling products covered by the superior '623 patent. Opticurrent's corporate representative, Brad Brunell, further supported the jury verdict by confirming, based on his experiences while working at Microsoft and as an investor and advisor to semiconductor companies, that a range between two and five percent is reasonable and what he expected for licensing rates in the future when performing his due diligence to acquire the patent portfolio. (Appx3836-3837, Tr. at 437:3-438:3).

Consequently, the jury considered evidence of a comparable license by Mr. Congdon to a Canadian switch maker that included the following terms in exchange for a license under solely a United States issued patent:

- Rights granted for “worldwide” activities;
- A royalty base that included sales from Canada to anywhere in the world (including non-United States purchasers);
- A 2-3% royalty on such Net Sales, depending on exclusivity.

It was commercially rational for parties to the QBar License to omit express language that might address extraterritoriality concerns under United States patent law. “[I]n the real world, parties may negotiate licenses on a transnational (worldwide) basis and account for the fact that a license enabling the licensee (infringer) to exploit the United States market may, in practical effect, also enable it to exploit the broader, global market.” 1 Chisum on Patents § 20.07 (2019). Here, the comparable license admitted into evidence and considered by the jury showed a foreign switch maker laying the groundwork to exploit the United States market using a single unitary royalty rate / royalty base formula that paid Mr. Congdon whether or not it sold covered product directly into the United States. Trial evidence showed that QBar availed itself of this convenience, with substantial United States covered sales to United States entities such as Ford Motor Company, IBM, the Massachusetts Institute of Technology and Welch-Allyn. (Appx3900-3901, Tr. at 501:5-10, 502:16-21).

The District Court held pre-trial that it was for the jury to determine whether the QBar License was comparable or not. (Appx2483-2484, Tr. at 51:17-52:5).

POWI did not object to its admission into evidence during the trial. (Appx3830, Tr. at 431:7-16). POWI did not seek, and the District Court did not provide, any limiting instruction on how the jury might use the QBar License. *See* Fed. R. Evid. 105 (permitting limiting instructions). Thus the jury was entitled to consider the QBar License on any issue for which it was relevant, including the royalty base. The District Court’s suggestion in a footnote (lacking any citation of authority) that the QBar License did not constitute royalty-base evidence (as opposed to royalty rate) is incorrect. (Appx105 n.1). Juries are entitled to consider documents admitted into evidence for whatever reasonable inferences they allow, whether or not counsel during trial asked them to do so explicitly. *See, e.g., E.I. du Pont de Nemours & Co. v. Unifrax I LLC*, 921 F.3d 1060, 1067-68 (Fed. Cir. 2019) (“The question is not whether there is literally no evidence supporting the party against whom the motion is directed but whether there is evidence upon which the jury could properly find a verdict for that party.”); *see also Coll. Network, Inc. v. Moore Educ. Publrs., Inc.*, 378 F. App’x 403, 414 n.5 (5th Cir. 2010) (jury permitted to view and visually compare evidence such that “[t]he evidence does not point so strongly and overwhelmingly in favor of TCN that a reasonable jury could not arrive at a contrary verdict.”) (internal citation omitted); Fed. R. Evid. 105 (no limiting instruction sought). In any event, the District Court overlooked that trial testimony explicitly

pointed out the salient royalty base features of the QBar License. (Appx3834-3836, Tr. 435:11-437:9 naming its “worldwide” scope and its “Net Sales” definition).

With respect to the royalty base, POWI previously produced voluminous sales records from which sales revenues and units sold could be calculated. On January 22, 2019, the Court granted Opticurrent’s request to utilize F.R.E. 1006 summaries of these materials, holding that the summaries were admissible without a sponsoring witness. (Appx2141). At trial, these summaries were entered into evidence and fully available for the jury’s consideration. (Appx4064-4065, Tr. at 664:18-665:6).

At trial, POWI designated Ben Sutherland, Vice President of worldwide sales, to testify on the accused products’ revenues and units sold. (Appx4262, Tr. at 762:3-13). Mr. Sutherland confirmed his familiarity with the information contained in the F.R.E. 1006 summaries and agreed that the revenue information indicated sales of accused products totaling approximately \$666,648,477. (Appx4162-4165, Tr. at 762:16-765:2). In addition, Mr. Sutherland confirmed the summaries represented worldwide sales, one-third of which are ultimately consumed by the United States market. (Appx4166-4167, Tr. at 766:6-767:22; Appx4183, Tr. at 783:2-6). Therefore, taking the worldwide sales and dividing by three results in \$222,216,159 attributable to revenues for products that were sold into the United States. (Appx4167, Tr. at 767:8-18). As confirmed by Mr. Sutherland, when POWI is designing its products in northern California, it is making sure that every one of those

products, wherever sold, meets industry standards set for the United States. (Appx4182, Tr. at 782:2-21). All of this supports the jury’s verdict applying the QBar License rate and base, accounting for the improvement of the ’623 patent.

In short, the jury could infer that POWI and Mr. Congdon, during the hypothetical negotiation, would emulate aspects of the QBar License. The POWI “worldwide” royalty base, under the Net Sales framework of the QBar License, was the entire \$666 million amount as a factual matter (prior to making any needed adjustment to comply with the legal bar against extraterritoriality). As discussed in the next section, a separate legal doctrine would have reduced this amount for use in calculating claimable damages, but not by as much as the District Court believed.

No categorical rule exists preventing a jury from considering the full amount of a reasonable royalty base revealed by the facts, when the amount happens to include items uncorrelated with direct infringement. Patent law has long recognized that, in appropriate factual circumstances, non-infringing items can properly exist in a royalty base alongside the infringing items, when the jury awards damages in the form of a reasonable royalty. *See Fujifilm Corp. v. Benun*, 605 F.3d 1366, 1373 (Fed. Cir. 2010) (“[T]he jury was entitled to rely on evidence of bundling and convoyed sales in determining the proper scope of the royalty base. [Citation omitted]. ‘The fact that bundling and convoyed sales affected [Fuji’s] estimate of both the royalty base and the royalty rate is thus not a sufficient reason to nullify the jury’s award.’”

(quoting *Interactive Pictures v. Infinite Pictures*, 274 F.3d 1371, 1385 (Fed. Cir. 2001)).

B. The Jury Already Made All Adjustments Needed for Its Award to Comply With the Presumption Against Extraterritoriality

Given that the jury already reduced the royalty base to include only infringing items that are imported into the United States, the jury already averted any extraterritoriality concerns. It did not multiply the \$666 million base against 3% to reach its verdict, but rather (consistent with Opticurrent's closing argument) multiplied a \$222 million base against 3%. This comported with evidence at trial that about one-third of POWI's infringing switches are imported into the United States. (Appx4166-4167, Tr. at 766:6-767:22; Appx4183, Tr. at 783:2-6).

Evidence at trial established that POWI is a United States company (Appx2651); that POWI designs the infringing chips in the United States (Appx4178, Tr. at 778:6-16; Appx4182-4183, Tr. at 782:4-783:5); that 100% of the infringing chips contain design features inserted to meet United States specifications and requirements (Appx4182-4183, Tr. at 782:4-783:5); and that, even though manufacture occurs outside the United States, one-third of the global supply gets imported into the United States based on reliable industry estimates. (Appx4166-4167, Tr. 766:9-767:18). The jury used this one-third measure to come up with a \$222 million royalty base. But the District Court in its JMOL ruling made a sharp reduction, aligning the royalty base solely with evidence of POWI's direct sales in

the United States. (Appx60, 6% of \$666 million, equal to 18% of the jury's royalty base). This was legal error.

This Court has already held what reduction in damages is needed to comply with the presumption against extraterritoriality, when a case involves electronic chips sold entirely outside the United States. The answer is straightforward: Reduce an otherwise-worldwide sales royalty base just to those chips that are imported into the United States. That is the holding of *Carnegie Mellon University v. Marvell Technology Group, Ltd.*, 807 F.3d 1283 (Fed. Cir. 2015).

In *Carnegie Mellon*, the semiconductor chips at issue were for use in hard-disk drives. *Id.* at 1288. Of 2.34 billion infringing chips sold globally in extraterritorial transactions, just over half a billion made it to the United States via importation. *Id.* The chips were first manufactured at a Taiwanese foundry, and then sent to customers' manufacturing sites in Asia to be put into customer drives. *Carnegie Mellon Univ. v. Marvell Tech. Group Ltd.*, 986 F. Supp. 2d. 574, 594 (W.D. Pa. 2013). Those drives were then sold to overseas laptop manufacturers, who in turn incorporated the drives into their products at their own factories. *Id.* Estimates of import data at trial showed that up to 556,812,092 of the 2.34 billion accused chips inside such drives and laptops were then imported into the United States, within such assemblies. *Id.*

In ruling on an appeal from post-trial motion rulings, this Court held that Marvell had “presented no basis on which to deem legally insufficient, or of deficient weight for new-trial purposes, the evidence CMU submitted to the jury, based on industry data sources, of how many of Marvell’s hard-drive chips were imported into the United States.” *Carnegie Mellon*, 807 F.3d at 1308. Under such analysis, this Court held, “we see no extraterritoriality bar,” because “Section 271(a) makes clear that Congress meant to reach such ‘import[ation]’ and ‘use[]’ as domestic conduct.” *Id.* at 1307-08. For royalties based on the 556,812,092 chips whose inclusion in damages stemmed from their importation (as opposed to inclusion based “entirely on the location of sale”), this Court “therefore affirme[ed] the judgment insofar as the royalty rests on imported chips.” *Id.* The only portion of damages in *Carnegie Mellon* that required remand for further consideration was a type of damages Opticurrent did not claim: global sales for chips “made and delivered abroad but never imported into the United States.” *Id.* at 1288.

Within its analysis, this Court noted that “*all* of Marvell’s *sales* are strongly enough tied to its domestic infringement as a causation matter to have been part of the hypothetical-negotiation agreement,” but deemed that fact was “not enough to use the sales as a direct measure of the royalty except as to sales that are domestic (where there is . . . no importing).” *Id.* at 1307 (emphasis added). Put differently, where there *is* importing, and where foreign sales would have factually been part of

the hypothetical-negotiation agreement, the imported items properly exist in the royalty base. *Id.* at 1307-08.

This holding directly applies here. The jury award included infringing chips that were imported into the United States, most of which originating from foreign sales that, as a causation matter, would have been included as part of the hypothetical negotiation. Hence the jury calculated correctly. It did not have to make a further reduction by 82% to capture just those sales that POWI directly made in the United States. This Court put no such limitation on the Marvell royalty base in *Carnegie Mellon*, nor should it do so here. The District Court therefore erred when it made this 82% reduction.

In granting POWI’s JMOL motion, the District Court attempted to distinguish *Carnegie Mellon*. There, the District Court stated that this Court’s discussion approving of the inclusion of imported chips in the royalty base stemmed from the jury’s verdict of inducement under 35 U.S.C. § 271(b), not from 35 U.S.C. § 271(a) direct infringement. The District Court contrasted the trial here, where the jury found no inducement. (Appx56-59). The District Court simply misread *Carnegie Mellon*.

First, the section of this Court’s opinion concerning extraterritoriality that endorsed the inclusion of imported chips (Section II.C.3) never mentions Section 271(b). Indeed the word “inducement” (in any form) never appears in the Court’s opinion. The section on extraterritoriality solely mentions Section 271(a). If the

District Court were right, this Court might have written that imported chips are properly part of the royalty base because Marvell had induced their importation by others, avoiding completely most discussion of extraterritoriality. But this Court did not. The District Court therefore invoked a distinction divorced from this Court's actual legal reasoning.

Second, every time this Court mentioned importation in the *Carnegie Mellon* decision, it did so in the passive voice. This Court never specified, and was agnostic about, who did the importing that avoided the extraterritoriality bar. With such careful language, this Court connoted that it was not significant *who* did the importing for such chips to have sufficient domestic connection to be allowed into the royalty base, once Section 271(a) infringement by Marvell was found.

Finally, as quoted above, this Court's extraterritoriality discussion focused on what it would take for proper inclusion of chips in the royalty base that met the causation requirement as a factual matter to be in the hypothetical negotiation royalty base based on Marvell's "sale." *Id.* at 1307. Clearly, "sale" by Marvell in this context is a Section 271(a) type activity, not Section 271(b). This hypothetical-negotiation royalty base included "*all*" foreign-sold chips. This Court held that, of these, only those which someone eventually imports are properly within the calculation (leaving unspecified who does the importing). None of this analysis has anything to do with

inducement liability or inducement damages, and the District Court was wrong to believe otherwise.

In fact, the Supreme Court’s later decision in *WesternGeco* confirms the correctness of *Carnegie Mellon*, and of the jury award. *WesternGeco* held that damages based on foreign sales are permitted, in a context where a patentee claims Section 284 damages based on infringement under Section 271(f)(2). 138 S. Ct. at 2136-37. There is a “domestic application of the statute” in such instances, because Section 284 incorporates (on those facts) Section 271(f)(2), which itself “focuses on domestic conduct”—*i.e.*, supplying in or from the United States. *Id.* at 2137. Since ION’s domestic act of supplying components that infringed the patent was the object of Section 284’s “solicitude,” relevant conduct occurred in the United States, even though the measure of damages accrued based on acts that occurred extraterritorially. *Id.* Notably here, where there are domestic acts of infringement giving rise to liability, it is wrong to “conflate[] legal injury with the damages arising from that injury”. *Id.* at 2138 (refuting dissent contention).

Applying *WesternGeco*, there was no dispute that POWI makes substantial Section 271(a) sales in the United States—the measure of the District Court’s eventual JMOL jury award reduction. Once such “legal injury” existed, it was “wrong to conflate” the extent of that injury with the damages. This means the jury could properly consider POWI’s sale of 6% of its chips directly into the United

States, combined with its personnel designing 100% of its chips in the United States to meet United States specifications, opening the door to including in the royalty base the one-third of global chips that eventually get imported into the United States.

This Court stated the principle even more explicitly in *Carnegie Mellon*. “Significantly, once one extends the extraterritoriality principle to confining how damages are calculated, it makes no sense to insist that the action respecting the product being used for measurement itself be an *infringing* action.” *Carnegie Mellon*, 807 F.3d at 1306 (noting that “here, the claim is a method claim, but the damages measuring product practices the method in its normal intended use.”). Consequently, for the portion of the one-third of global chips that find their way to the United States from a foreign sale, even where they do not originate with an activity that qualifies as direct infringement under 35 U.S.C. § 271(a), “it makes no sense” to impose a legal bar against their inclusion into a royalty base.

C. Decisions That Vacated “Non-Infringing” Royalty Bases are Inapposite

In rendering its JMOL decision, the District Court cited two other decisions that speak to the question of the scope of a reasonable royalty base. (Appx103, citing *Enplas Display Device Corp. v. Seoul Semiconductor Co., Ltd.*, 909 F.3d 398, 411-12 (Fed. Cir. 2018) (quoting *AstraZeneca AB v. Apotex Corp.*, 782 F.3d 1324, 1343 (Fed. Cir. 2015))). Neither *Enplas* nor *AstraZeneca* controls here. Those decisions at most show that under some factual scenarios, a court should not include products

in a royalty base that do not contain the claimed invention of a non-expired patent. They do not address how the presumption against extraterritoriality works, or how it might permit inclusion of amounts provably tied to Section 271(a) activity by a United States actor.

In *Enplas*, an expert calculated lump sum damages for the accused products based improperly on quantities of sales of non-accused products. 909 F.3d at 411-13. This measure would have been proper had the expert tied such past sales to an estimate of infringing future sales. *Id.* Because of the lack of causation, the lump sum part of the damages had to be reduced. *Id.* This case is distinguishable because it addressed a need to exclude noncovered product in certain limited factual scenarios. In contrast here, all of the District Court's reduction in damages subject to this appeal encompassed product that the jury found was covered by the patent and imported into the United States. To read *Enplas* as categorically forbidding consideration of noncovered product in every calculation of damages would be incorrect. Such an interpretation would conflict with this Court's decisions permitting a royalty base to be increased by the amount of noninfringing convoyed or bundled sales. *E.g., Interactive Pictures v. Infinite Pictures*, 274 F.3d 1371, 1385 (Fed. Cir. 2001); *accord Carnegie Mellon*, 807 F.3d at 1306 (holding "it makes no sense" to require that all products being used for measurement of damages result from an infringing action).

AstraZeneca is also inapposite. In *AstraZeneca*, a patentee could not include post-expiration damages in its royalty base. 782 F.3d at 1343. Again, this does not speak to any question of how to apply the presumption against extraterritoriality. All of the reduction in damages subject to this appeal concerned activities occurring during the unexpired term of the patent-in-suit.

III. POWI’S FAILURE TO ARGUE DAMAGES TO THE JURY WAIVED ITS JMOL ARGUMENT UNDER NINTH CIRCUIT LAW

Independent of the merits arguments, as an alternative ground for reversal, the District Court erred by not finding waiver. While the District Court decision did address some of Opticurrent’s waiver arguments, it failed to reach or address the most significant one. POWI let the jury make the calculation Opticurrent asked of it, without offering any alternative damages calculation of its own. Though it did ask the Judge for the 6% result through motion practice, POWI never asked the jury. Ignored by the District Court, such waiver should have been fatal to POWI’s JMOL arguments, regardless of which side is right about extraterritoriality.

During Opticurrent’s closing, POWI did not raise any objection to the use of the financial summaries it had admitted were “accurate” (Appx2146-2147, Tr. at 5:25-6:1-5), nor the one-third calculation for a royalty base that Opticurrent’s counsel explained to the jury. (Appx4253-4254, Tr. at 853:21-854:1, 854:2-19). POWI’s failure to object serves as a waiver. *See, e.g., Matos v. Chloe Z Fishing Co.*, 1997 U.S. App. LEXIS 31763, at *3-4 (9th Cir. Nov. 7, 1997) (“Chloe Z did not

object to the calculation during closing argument and did not request a cautionary instruction. Chloe Z has therefore waived the opportunity for appellate review of these purported [calculation method] errors.”).

POWI’s own closing confirms the depth of the waiver. POWI spent its entirety arguing non-infringement and was silent about any other basis upon which the jury might reduce the damages sought by Opticurrent. (Appx4261-4264, Tr. at 861:1-864:3). If not zero damages, POWI invited the jury to do whatever it wanted consistent with the trial record. POWI offered no reasoned basis for the jury to conclude that the one-third measure had any flaw, much less a flaw so glaring that only POWI’s alternative 6%-of-global-sales measure could constitute a legally proper royalty base. *Cf. Leonard v. Stemtech Int’l, Inc.*, 834 F.3d 379, 394 (3d Cir. 2016) (correct to deny new trial because the “damages award was tethered to the record, which the jury was entitled to credit, and the jury was presented with no evidence that provided an alternative calculation.”); *Steves & Sons, Inc. v. Jeld-Wen, Inc.*, 3:16-cv-545, 2019 U.S. Dist. LEXIS 41232, at *15 (E.D. Va. Mar. 13, 2019) (“JELD-WEN chose not to offer evidence of that sort and thus it did not provide its own calculation. Having made that decision, JELD-WIN must bear the consequences of failing to give the jury an alternative form of evidence from which to choose.”).

POWI's inclusion of the argument in a timely JMOL motion does not save it from its jury waiver. Nor does the disembodied testimony about 6% of sales into the United States. (Appx4179, Tr. at 779:2-9). Just because a POWI witness mentioned a number does not equate with POWI asking the jury to use it in an alternative damages calculation. *See MEI Int'l, Inc. v. Schenkers Int'l Forwarders, Inc.*, 807 F. Supp. 979, 988 (S.D.N.Y. 1992) (holding it "inconsequential" that defendant presented testimony usable to construct a damages-mitigation calculation, "without [defendant] **presenting** any proof or **calculation** of an amount by which [defendant] claimed [plaintiff's] damages were mitigated," thus defendant "waived" the "opportunity to present contrary proof") (emphasis added).

At the final charge conference, POWI embraced as in-bounds Opticurrent's one-third-of-global-sales measure. Some patent trials involve significant litigation over the legal impact of extraterritorial activity on the proper measure of damages. For example, it is commonplace for a litigant to seek a jury charge to protect against a jury mistakenly embracing wholly extraterritorial damages measures. *See, e.g., France Telecom S.A. v. Marvell Semiconductor*, Case No. 12-cv-04967-WHO (N.D. Cal., Judge Orrick). (Appx3194, jury instructions from *France Telecom*). Yet POWI did no such thing at the charge conference in this case. POWI understood that the general *Georgia Pacific* instruction would provide sufficient guidance to the jury for

its deliberations on damages, as it eventually did when the jury determined the royalty base.

Had POWI presented a convincing jury argument about its 6% measure, and had the jury charge included a proper instruction on that evidence, the jury might have sided with POWI based on competing evidence. But instead, POWI's silence waived the objection while encouraging the jury to do exactly what it did in the eventuality that the jury found infringement: Award the requested damages based on a royalty base that included the one-third of global chip sales that are imported to the United States. *See Fed. R. Civ. P. 51(c-d)* (describing charge waiver and the proper time for objections).

Post-trial motions are not a game of "gotcha," to be used after a jury performs calculations introduced into trial without a single objection, and without even a request for a jury charge that accomplishes the late-requested calculation. The Court should reverse the grant of JMOL on the merits. But at a minimum, the Court should reverse on this alternative ground (not reached or addressed by the District Court) that POWI's failure to provide the jury its alternative calculation waived any assertion of error through post-trial motion practice denigrating the jury's calculation of damages.

IV. THE DISTRICT COURT INCORRECTLY DISMISSED “WITHOUT PREJUDICE” POWI’S INVALIDITY COUNTERCLAIM AFTER ITS MERGER INTO THE JUDGMENT

In the July 3, 2019 order quantifying the final judgment and interest amounts, about one month after the ruling on post-judgment motions, the District Court ordered and adjudged that POWI’s counterclaim of invalidity is “dismissed without prejudice.” (Appx143). But the District Court lacked authority to dismiss this counterclaim at that time, and certainly not “without prejudice.” POWI’s counterclaim had already been adjudged against it. Therefore, this Court should vacate this aspect of the July 3, 2019 order. This is important to Opticurrent to ensure that it receives the full *res judicata* benefit of the judgment, since litigation between the parties relating to the ’623 patent continues. *Cf. Tyco Healthcare Group LP v. Ethicon Endo-Surgery, Inc.*, 587 F.3d 1375, 1380 (Fed. Cir. 2009) (explaining how appellant would “feel aggrieved” by not getting *res judicata* benefit of dismissal with prejudice, but rejecting request convert dismissal to “with prejudice” on the facts).

It is hornbook law that all defenses that could have been raised (such as invalidity) are merged into a final judgment. *Foster v. Hallco Mfg. Co.*, 947 F.3d 469, 478 (Fed. Cir. 1991). The final judgment for this purpose is the initial judgment, rendered on the jury verdict on March 4, 2019. (Appx2679). POWI could have (and did) raise invalidity as a defense. Having dropped it on the eve of trial without

seeking its pre-trial dismissal, POWI is not entitled to a “without prejudice” disposition, and however many do-overs it wants.

POWI’s answer to Opticurrent’s original Complaint included a counterclaim of invalidity of the ’623 patent. (Appx423-430). During the course of the litigation, POWI served its Invalidity Contentions as required by the local patent rules and continued its validity challenge through expert discovery, serving an expert report on invalidity that Opticurrent was required to rebut. POWI even moved for summary judgment of invalidity based on one of its alleged prior designs.

At the Final Pretrial Conference on February 11, 2019, POWI informed the Court that it would not be presenting any evidence relating invalidity at trial, and that the jury would not be asked to make a determination of invalidity. (Appx2541-2542, Tr. at 109:18-110:7). In response, the District Court stated: “The fact is, validity was raised and litigated in this case, and now it is not being raised.” (Appx3597, Tr. at 198:3-4). POWI chose to abandon its invalidity defense. In other words, invalidity was a defense that “could have been raised,” but it was not, and thus the counterclaim raising it merged into the final judgment as unsuccessful.

As a matter of law, “a failure to prove the allegations alleged in a complaint requires a decision on the merits, not a [mere dismissal].” *Litecubes, LLC v. N. Light Prods., Inc.*, 523 F.3d 1353, 1361 (Fed. Cir. 2008). In such instances, this Court reverses dismissals without prejudice and remands with instructions to dismiss with

prejudice. *Cordis Corp. v. Boston Sci. Corp.*, 561 F.3d 1319, 1339-40 (Fed. Cir. 2009). This Court should do so here. This Court should vacate the July 3, 2019 order with respect to its “without prejudice” dismissal of the invalidity counterclaim and remand with instructions to dismiss with prejudice, since the March 4, 2019 judgment was final and POWI had not proved (nor attempted to prove) its counterclaim allegations made within a then-pending counterclaim.

CONCLUSION

For the foregoing reasons, this Court should reverse the June 5, 2019 ruling of the District Court insofar as it reduced the jury award by 82%, reinstate that award, and remand for further proceedings on pre- and post-judgment interest and post-judgment royalties. This Court should also vacate the July 5, 2019 ruling that dismissed invalidity counterclaims “without prejudice,” with instructions to dismiss “with prejudice.”

Respectfully submitted,

/s/ Robert P. Greenspoon _____

UNITED STATES DISTRICT COURT
NORTHERN DISTRICT OF CALIFORNIA

OPTICURRENT, LLC,
Plaintiff,
v.
POWER INTEGRATIONS, INC., et al.,
Defendants.

Case No. 17-cv-03597-EMC

FILED UNDER SEAL

ORDER RE POST-TRIAL MOTIONS

Docket No. 292, 295, 296, 298, 303, 309,
313

Plaintiff Opticurrent, LLC (“Opticurrent”) brought this suit against Defendant Power Integrations, Inc. (“PI”), alleging infringement of U.S. Patent No. 6,958,623 (the “‘623 patent”). The ‘623 patent, which was issued to inventor James Congdon in 2005, claims “[a] noninverting transistor switch having only three terminals” which “limits the current leakage between the third terminal and the second terminal.” Docket No. 1-1. On February 25, 2019, after a four-day trial, the jury delivered a verdict finding that: (1) PI literally infringed claim 1 of the ‘623 patent; (2) PI infringed claim 1 of the ‘623 Patent under the doctrine of equivalents; (3) PI did not induce infringement of the ‘623 patent; and (4) Opticurrent is entitled to damages in the amount of \$6,666,484.77 (*i.e.*, 3% of PI’s sales, through March 31, 2018, of \$222,216,159). Docket No. 285.

The parties have filed a number of post-trial motions. For the reasons discussed below, the Court rules as follows:

(1) PI's motion for judgment as a matter of law is

- a. **DENIED** as to literal infringement;
- b. **DENIED** as to infringement under the doctrine of equivalents;
- c. **GRANTED** as to the royalty base used to calculate damages;

2 e. DENIED as to damages;

3 (2) Opticurrent's motion for judgment as a matter of law on induced infringement is
4 **DENIED;**

5 (3) Opticurrent's motion for supplemental judgment on accused products excluded from
6 the trial is **DENIED**;

7 || (4) Opticurrent's motion for ongoing royalty is **GRANTED**;

8 (5) Opticurrent's motion for prejudgment and postjudgment interest is **GRANTED**;

9 (6) Opticurrent's motion for attorneys' fees is **DENIED**;

10 (7) PI's motion to stay execution of judgment pending appeal is **DENIED**.

I. LEGAL STANDARDS

A. Judgment as a Matter of Law

A party may make a motion under Federal Rule of Civil Procedure 50(a) for judgment as a matter of law before a case is submitted to the jury. If the court denies or defers ruling on the motion, and the jury then returns a verdict against the moving party, the party may renew its motion under Rule 50(b). *E.E.O.C. v. Go Daddy Software, Inc.*, 581 F.3d 951, 961 (9th Cir. 2009). A court “review[s] a jury’s verdict for substantial evidence in ruling on a properly made motion under Rule 50(b).” *Id.* “The test applied is whether the evidence permits only one reasonable conclusion, and that conclusion is contrary to the jury’s verdict.” *Barnard v. Theobald*, 721 F.3d 1069, 1075 (9th Cir. 2013) (quoting *Josephs v. Pac. Bell*, 443 F.3d 1050, 1062 (9th Cir. 2005)). Thus, judgment as a matter of law should be granted only where “there is no legally sufficient basis for a reasonable jury to find for that party on that issue.” *Krechman v. Cnty. of Riverside*, 723 F.3d 1104, 1109–10 (9th Cir. 2013) (quoting *Jorgensen v. Cassiday*, 320 F.3d 906, 917 (9th Cir. 2003)). “[I]n entertaining a motion for judgment as a matter of law, the court . . . may not make credibility determinations or weigh the evidence,” and “may not substitute its view of the evidence for that of the jury.” *Id.* at 1110 (citations and internal quotation marks omitted).

B. New Trial

A court may grant a new trial under Rule 59 "if 'the verdict is contrary to the clear weight

1 of the evidence, or is based upon evidence which is false, or to prevent, in the sound discretion of
2 the trial court, a miscarriage of justice.”” *United States v. 4.0 Acres of Land*, 175 F.3d 1133, 1139
3 (9th Cir. 1999) (quoting *Oltz v. Saint Peter’s Community Hosp.*, 861 F.2d 1440, 1452 (9th Cir.
4 1988)). Unlike on a motion for a judgment as a matter of law, when considering a motion for a
5 new trial, the Court “can weigh the evidence and assess the credibility of witnesses, and need not
6 view the evidence from the perspective most favorable to the prevailing party.” *Landes Constr.
7 Co. v. Royal Bank of Canada*, 833 F.2d 1365, 1371 (9th Cir. 1987). However, a motion for new
8 trial should not be granted “simply because the court would have arrived at a different verdict.”
9 *Pavao v. Pagay*, 307 F.3d 915, 918 (9th Cir. 2002).

10 **II. DISCUSSION**

11 A. **PI’s Post-Trial Motions**

12 PI moves for judgment as a matter of law or, in the alternative, for a new trial, on several
13 issues. Docket No. 309 (“PI Mot.”) at 1.

14 1. **Literal Infringement**

15 PI argues that Opticurrent failed to prove that PI literally infringed the ’623 patent. PI
16 Mot. at 5–6. In so arguing, PI fixates upon the preamble to claim 1 of the ’623 patent, which
17 describes the claimed invention as “[a] noninverting transistor switch having only three
18 terminals.” Docket No. 1-1. PI insists that its accused products do not literally infringe because
19 they are switches with four terminals, not three. PI Mot. at 5. However, Judge Gilstrap already
20 declined to adopt this simplistic reading of the claim language during claim construction when he
21 ruled that the phrase “a noninverting transistor switch having only three terminals” means “a
22 noninverting transistor switch with three terminals *that does not have a fourth terminal connected*
23 *to a power supply.*” Docket No. 58 at 13 (emphasis added). Judge Gilstrap explicitly rejected PI’s
24 contention that the preamble language limits the ’623 patent to switches with “no more than three”
25 terminals, noting that the patent specification “states that a three terminal noninverting transistor
26 switch may have a fourth terminal/pin and still be considered a three terminal switch.” *Id.* at 12–
27 13. PI’s argument that its accused products do not infringe because they contain more than three
28 terminals is not availing; it ignores the claim construction ruling herein.

1 The more salient question is whether the fourth terminal in the accused products is
2 “connected to a power supply.” *Id.* at 13. If it is, then the accused products would not infringe
3 under the Court’s claim construction. PI claims it “introduced unrebutted evidence” at trial that
4 “its accused products cannot be used unless the fourth pin is attached to an external capacitor that
5 is necessary to supply power to the chip.” PI Mot. at 5–6. However, Opticurrent’s expert testified
6 that the external capacitor is not a “power supply” because the capacitor itself receives its power
7 from an external power source, and serves as a filter for the external power source rather than an
8 independent source of power. *See* Tr. at 345:22–346:9, 347:11–351:13, 621:2–622:23. In the face
9 of this evidence, PI’s characterization of its products is not the “only one” permitted by the
10 evidence, *Barnard*, 721 F.3d at 1075; nor is the jury’s verdict of infringement “contrary to the
11 clear weight of the evidence,” *4.0 Acres of Land*, 175 F.3d at 1139. The jury could reasonably
12 have credited Opticurrent’s explanation that the capacitor in PI’s accused products is not a “power
13 supply.”

14 Accordingly, PI’s motion is **DENIED** with respect to literal infringement.

15 2. Infringement under the Doctrine of Equivalents

16 PI also contends that Opticurrent failed to prove infringement under the doctrine of
17 equivalents. PI Mot. at 6–8. As with its literal infringement arguments, however, PI’s position on
18 this point is fundamentally a disagreement with the Court’s claim construction and the jury’s
19 weighing of the evidence and is therefore unpersuasive.

20 PI’s primary argument is that Opticurrent was “required to show . . . the presence of a
21 ‘noninverting transistor switch having only three terminals’” because the “all elements rule”
22 requires that all claim elements must be established under the doctrine of equivalents. PI Mot. at
23 6. As explained above, Judge Gilstrap construed “having only three terminals” to mean “not
24 hav[ing] a fourth terminal connected to a power supply.” Docket No. 58 at 13. And Opticurrent
25 presented evidence to the jury to counter PI’s characterization of its accused products containing a
26 fourth terminal connected to a power supply. The jury weighed the competing evidence and
27 concluded that the fourth terminal in PI’s products is not connected to a power supply, and
28 therefore that all elements of claim 1 of the ’623 patent are present in the accused products. This

1 conclusion was not unreasonable in light of the evidence at trial.

2 Citing the proposition that “the concept of equivalency cannot embrace a structure that is
3 specifically excluded from the scope of the claims,” *Dolly, Inc. v. Spalding & Evenflo Companies,*
4 *Inc.*, 16 F.3d 394, 400 (Fed. Cir. 1994), PI claims that its four-terminal switches are specifically
5 excluded by the ’623 patent’s “only three terminals” language, PI Mot. at 7. Again, the ’623
6 patent, as construed by Judge Gilstrap, *does* exclude switches that contain a fourth terminal
7 *connected to a power supply*. But the jury determined, on the basis of the evidence proffered at
8 trial, that the accused products do *not* contain a fourth terminal connected to a power supply. PI’s
9 accused products thus are not “specifically excluded” from the claims as construed herein.

10 PI’s third argument is that Opticurrent’s equivalence theory relied on “comparing the
11 internal capacitor in [the inventor] Mr. Congdon’s breadboard (and associated drawing) with the
12 external capacitor used by the accused products.” PI Mot. at 7. According to PI, this contravened
13 the Court’s instruction to the jury that “in deciding the issue of infringement you may not compare
14 PI’s accused products to Mr. Congdon’s breadboard product or the accompanying drawing.
15 Rather, you must compare PI’s accused products to claim 1 of the ’623 patent when making your
16 decision regarding infringement.” Jury Instruction No. 29. In particular, PI highlights the
17 following exchange from the direct examination of Dr. Regan Zane, Opticurrent’s expert witness:

18 Q: Now, looking back at the patent, Exhibit 4, in the language we
19 were talking about, Dr. Zane, is the use of the capacitor with the
20 voltage stabilizer, like we just described in Exhibit 32, is that an
alternative type of conventional voltage stabilizer which is well
known in the art?

21 A: It could be considered so, yes. Although in this case in the
22 diagram that was shown previously, the voltage stabilizer really is
23 still the transistor I identified as a voltage stabilizer. The capacitor is
simply helping that voltage stabilizer be more reliable, more robust,
because it helps filter that node.

24 Tr. 325:2–12. PI claims that here, Dr. Zane was “expressly using” Trial Exhibit 32—Mr.
25 Congdon’s drawing—“to argue equivalents.” PI Mot. at 7.

26 PI did not object to this portion of testimony during trial. In any event, the context
27 indicates Dr. Zane was merely illustrating a term from the ’623 patent itself. The ’623 patent
28 includes circuit diagrams showing a transistor labeled “MOSFET 123.” Docket No. 1-1 at Fig. 5.

1 The patent explains that “MOSFET 123 functions as a voltage stabilizer,” and “could be replaced
2 by alternative types of conventional voltage stabilizers which are well known in the art without
3 departing from the spirit of the present invention.” *Id.* at col. 6:37–46. Opticurrent, through Dr.
4 Zane’s testimony, referenced this language to demonstrate that a capacitor such as the one in PI’s
5 accused products is an example of a “conventional voltage stabilizer which is well known in the
6 art,” and therefore that the accused products’ use of a capacitor connected to the fourth terminal
7 was contemplated by the ’623 patent. *See* Tr. at 321:1–20. In other words, Opticurrent did not
8 compare the accused products to Congdon’s drawing but to the ’623 patent, to which the drawing
9 gave meaning. Opticurrent’s line of questioning was not improper.

10 Finally, PI argues that Opticurrent’s equivalence presentation ran afoul of the principle that
11 “equivalent infringement is not available for structures which were known to the patent applicant
12 at the time of his application but were not disclosed in the patent.” PI Mot. at 8 (quoting *Sipex*
13 *Corp. v. Maxim Integrated Prod., Inc.*, No. CIV.A. 99-10096-RWZ, 2002 WL 1046699, at *1 (D.
14 Mass. May 24, 2002)); *see Chiuminatta Concrete Concepts, Inc. v. Cardinal Indus., Inc.*, 145 F.3d
15 1303, 1311 (Fed. Cir. 1998) (holding that equivalence cannot be found where “given the prior
16 knowledge of the technology asserted to be equivalent, it could readily have been disclosed in the
17 patent”). PI asserts that Mr. Congdon did not disclose that his claimed invention could incorporate
18 a capacitor in the ’623 patent. To the contrary, Mr. Congdon did exactly that in the patent when
19 he made clear that the MOSFET 123 “could be replaced by alternative types of conventional
20 voltage stabilizers which are well known in the art without departing from the spirit of the present
21 invention.” Docket No. 1-1 at col. 6:37–46. As Dr. Zane explained at trial, a capacitor is an
22 example of a conventional voltage stabilizer well known in the art. *See* Tr. at 321:1–20.

23 Accordingly, PI’s motion is **DENIED** with respect to infringement under the doctrine of
24 equivalents.

25 3. Royalty Base

26 The jury awarded Opticurrent damages in the amount of \$6,666,484.77, calculated using a
27 royalty rate of 3% and a royalty base of \$222,216,159. *See* Docket No. 285 at 2. The royalty base
28 was derived from PI’s sales revenue from April 2010 through March 2018. Tr. at 763:1–767:22.

1 During that period, the worldwide sales of PI's accused products totaled \$666,648,477, of which
2 an estimated one-third—\$222,216,159—eventually entered the United States. *Id.* PI asserts that
3 the royalty base used by the jury lacks an evidentiary basis because “Opticurrent’s argument that
4 one-third of PI’s products entered the United States was based on an *inducement* theory.” PI Mot.
5 at 4 (emphasis in original). Since the jury has found that there was no induced infringement, PI
6 reasons, the one-third figure cannot be sustained as a basis for damages. *Id.* PI accordingly asks
7 the Court to reduce the royalty base to 6% of PI’s sales. *Id.* at 3–4.

8 a. Background Principles

9 PI’s argument implicates two established principles of patent law. The first is that “[t]he
10 royalty base for reasonable royalty damages cannot include activities that do not constitute patent
11 infringement, as patent damages are limited to those ‘adequate to compensate for the
12 infringement.’” *Enplas Display Device Corp. v. Seoul Semiconductor Co., Ltd.*, 909 F.3d 398,
13 411–12 (Fed. Cir. 2018) (quoting *AstraZeneca AB v. Apotex Corp.*, 782 F.3d 1324, 1343 (Fed. Cir.
14 2015)). The second is that “patent laws, like other laws, are to be understood against a
15 background presumption against extraterritorial reach.” *Carnegie Mellon Univ. v. Marvell Tech.*
16 *Grp., Ltd.*, 807 F.3d 1283, 1306 (Fed. Cir. 2015) (citing *Microsoft Corp. v. AT & T Corp.*, 550
17 U.S. 437, 454 (2007)). The patent laws provide “a clear definition of what conduct Congress
18 intended to reach—making *or* using *or* selling in the United States *or* importing into the United
19 States” any patented invention without authority. *Id.* (citing 25 U.S.C. § 271(a)) (emphases in
20 original). Accordingly, “[w]here a physical product is being employed to measure damages for
21 the infringing use of patented methods, . . . territoriality is satisfied when and only when any one
22 of those domestic actions for that unit (e.g., sale) is proved to be present.” *Id.*

23 b. Evidence

24 The uncontested evidence at trial showed that PI makes, uses, and sells the vast
25 majority of its accused chips abroad. Although the accused products are designed in California,
26 they are manufactured in Asia. Tr. at 778:14–22. Most of the products are sold in China. *Id.* at
27 779:2–3. PI only sells “approximately 5 or 6 percent” of its products in the United States. *Id.* at
28 779:4–9. For the products sold abroad, no part of PI’s sales process takes place in the United

1 States. *Id.* at 779:10–14. The buyers of those products incorporate PI’s chips into power supply
2 products and then sell them to end-users. *Id.* at 779:15–24. PI estimates that approximately one-
3 third of its accused chips “eventually make their way into the United States” through these power
4 supply products manufactured by third parties. *Id.* at 780:4–8. This estimate is based on “a
5 general rule of thumb that roughly for the global volumes of electronic products made . . . roughly
6 30 percent is consumed in the U.S.” *Id.* at 766:9–14. Ben Sutherland, PI’s vice president of
7 worldwide sales, made clear that it was PI’s customers, not PI itself, that imported the accused
8 products into the United States:

9 Q: And who is it that is importing that third into the United States?

10 A: That's a good question. *We're kind of disconnected from that*
11 *part of the process because we're not involved in it.* But I could
imagine it's companies like Dell or Samsung themselves would
move their goods around the world and bring them into the U.S.

13 *Id.* at 780:9–15 (emphasis added). Opticurrent introduced no evidence controverting Mr.
14 Sutherland’s testimony that only 5 or 6 percent of PI’s revenue is domestic. *Id.* at 782:22–783:1.

c. Analysis

16 Courts “afford substantial deference to a jury’s finding of the appropriate amount of
17 damages,” and must uphold the jury’s award “[u]nless the amount is grossly excessive or
18 monstrous, clearly not supported by the evidence, or based only on speculation or guesswork.”
19 *Harper v. City of Los Angeles*, 533 F.3d 1010, 1028 (9th Cir. 2008) (internal quotation marks
20 omitted). On the above evidence, the jury could reasonably conclude that the proper royalty base
21 from which to calculate damages for PI’s direct infringement is 6% of PI’s worldwide sales,
22 because that is the portion of revenue derived from accused chips that PI itself “makes, uses, offers
23 to sell, or sells . . . within the United States or imports into the United States.” 35 U.S.C. § 271(a).
24 But there was no evidentiary basis for the jury to determine that the remainder of PI’s accused
25 products that eventually find their way into the United States could be included in the royalty base
26 for *direct* infringement, because Mr. Sutherland’s undisputed testimony established that those

1 products were imported by PI's customers, not by PI.¹ Thus, PI could only be liable for damages
2 arising from the sales of those products if the jury found that PI *induced* its customers to infringe.
3 The jury found no inducement. Accordingly, the jury's use of the royalty base of one-third of PI's
4 worldwide sales to assess damages for direct infringement is "clearly not supported by the
5 evidence." *Harper*, 533 F.3d at 1028. *See France Telecom S.A. v. Marvell Semiconductor Inc.*,
6 39 F. Supp. 3d 1080, 1103 (N.D. Cal. 2014) (precluding damages based on defendant's sale of
7 accused semiconductor chips because "there is no genuine issue of material fact that all sales of
8 the accused chips happened abroad," notwithstanding that "the chips may ultimately end up and be
9 used in the United States").

10 Opticurrent nevertheless insists, relying on *Carnegie Mellon Univ. v. Marvell Tech. Grp.*,
11 *Ltd.*, 807 F.3d 1283 (Fed. Cir. 2015), that the jury used the correct royalty base. Docket No. 321
12 at 3–4. In *Carnegie Mellon*, the defendant Marvell, a California-based company, was alleged to
13 have infringed two patents relating to semiconductor chips. *Carnegie Mellon Univ. v. Marvell*
14 *Tech. Grp., Ltd.*, 986 F. Supp. 2d 574, 582 (W.D. Pa. 2013). Marvell manufactured the infringing
15 chips in Taiwan and sold them to makers of hard-disk drives, who incorporated the chips into the
16 drives. *Id.* at 592–93. The hard-disk drives were then incorporated into laptops, and some of
17 those laptops were eventually imported back to the United States. *Id.* at 594. The jury found that
18 Marvell had infringed both patents, and awarded the plaintiff, CMU, a royalty based on Marvell's
19 worldwide sales. *Carnegie Mellon*, 807 F.3d at 1291–92. On appeal, Marvell challenged the
20 royalty base used by the jury. The Federal Circuit held that the chips that Marvell manufactured
21 and sold abroad but were ultimately imported into the United States were properly included in the
22 royalty base. *Id.* at 1305.

23 Opticurrent reads *Carnegie Mellon*'s analysis as controlling the outcome in this case
24 because one-third of the accused chips that PI manufactured and sold abroad were ultimately

25
26 ¹ Opticurrent argues that "the QBar license constitutes . . . evidence permitting the jury to find
27 that, in a hypothetical negotiation, Mr. Congdon and Defendant would have agreed to royalty base
28 used by the jury," because "the QBar license was for 'worldwide' rights." Docket No. 321 at 5.
However, the QBar license was introduced as a reference point for the jury to determine a royalty
rate for the '623 patent, not a royalty base.

1 imported into the United States. But there is a crucial distinction between the two cases. Unlike
2 here, in *Carnegie Mellon*, the “jury found that Marvell both directly *and indirectly* infringed the
3 two (method) claims at issue by developing, testing, and selling to its customers.” *Id.* at 1294
4 (emphasis added). Indeed, the district court emphasized that “CMU’s liability theories against
5 Marvell are critical to understanding the jury’s damages award” because “CMU argued that that
6 Marvell directly infringed the CMU Patents . . . as well as indirectly infringed by inducing and
7 contributing to the infringement by its customers in the United States.” *Carnegie Mellon*, 986 F.
8 Supp. 2d at 634–35. The finding of inducement allowed the jury to impose liability on Marvell for
9 chips that were imported to the United States by Marvell’s customers.

10 Opticurrent attempts to explain that distinction away by pointing out that “the Federal
11 Circuit expressly analyzed whether Marvell’s importation activities triggered damages under
12 Section 271(a),” which supposedly addresses “direct infringement,” not induced infringement.
13 Docket No. 321 at 4 n.1. Opticurrent misreads *Carnegie Mellon*. Any finding of induced
14 infringement necessarily hinges on the applicability of § 271(a) because “[i]nducement liability
15 requires a showing of direct infringement by a third party.” *Semiconductor Energy Lab. Co. v.*
16 *Chi Mei Optoelectronics Corp.*, 531 F. Supp. 2d 1084, 1112 (N.D. Cal. 2007) (citing *Moleculon*
17 *Research Corp. v. CBS, Inc.*, 872 F.2d 407, 410 (Fed. Cir. 1989)). The *Carnegie Mellon* court’s
18 assessment of damages against Marvell for inducement was thus predicated on the determination
19 that Marvell’s customers violated § 271(a). *Carnegie Mellon* does not stand for the proposition
20 that a finding of direct infringement alone subjects the infringer to damages for every subsequent
21 sale, use, or importation by its customers, even if the infringer had no knowledge of or did not
22 foresee its customers’ activities. Such a notion defies common sense, as it would render moot
23 inducement as a distinct basis for liability where accused products eventually and indirectly find
24 their way into the United States. Indeed, at the hearing, Opticurrent’s counsel acknowledged that
25 his interpretation of *Carnegie Mellon* would allow a patentee to recover damages for induced
26 infringement even after a jury verdict of no inducement. Liability would obtain no matter how
27 remote, unintended, or unforeseeable the ultimate importation of the product incorporating the
28 accused product. A footnote in Opticurrent’s motion seeking judgment as a matter of law on

1 inducement similarly exposes the illogicality of Opticurrent's position: "This relief sought in this
2 Motion would be a moot point if the Court upholds the royalty base found by the jury to which
3 Power Integrations now objects." Docket No. 317 at 1 n.1.

4 Given that PI did not induce infringement, there is no evidentiary basis to support a
5 royalty base of \$222,216,159. Instead, the trial evidence can only support a royal base of 6% of
6 PI's worldwide sales.

7 d. Waiver/Estoppe

8 Opticurrent contends that PI is barred from challenging the royalty base for two reasons.
9 First, Opticurrent asserts that PI waived its challenge by failing to object to the one-third royalty
10 base before and during trial. Not so. Before trial, PI expressly preserved its "challenge [to] the
11 royalty base . . . through fact witnesses, cross-examination, and attorney argument." Docket No.
12 184 at 4 (PI's opposition to Opticurrent's motions in limine). PI then raised such a challenge at
13 trial by eliciting Mr. Sutherland's testimony that only 6% of PI's revenue derive from its own
14 domestic sales. Moreover, PI filed a Rule 50(a) motion in which it specifically argued that
15 "[m]ost of Opticurrent's claimed damages are based on alleged inducement, not alleged direct
16 infringement" and therefore that "at least 94% of PI's pre-suit sales . . . must be excluded from
17 damages." Docket No. 281 at 2. Accordingly, PI did not waive its challenge to the royalty base.

18 Second, Opticurrent urges the Court to apply the doctrine of judicial estoppel against PI for
19 a position PI took in *Power Integrations, Inc. v. Fairchild Semiconductor International, Inc.*, No.
20 04-cv-1371-LPS (D. Del. filed Oct. 20, 2004). Docket No. 321 at 6–8. In that case, as the
21 prevailing plaintiff in a patent infringement action, PI argued that it was entitled to damages from
22 Fairchild for lost profits worldwide due to infringement in the United States. *Id.*, Exh. 7 at 1. PI
23 cited the Supreme Court's recent decision in *WesternGeco LLC v. ION Geophysical Corp.*, 138 S.
24 Ct. 2129 (2018) as support for its position that "foreseeable foreign losses are properly included in
25 U.S. patent damages." Docket No. 321, Exh. 7 at 2. That position, according to Opticurrent,
26 contradicts PI's position in this case that it is not liable for foreign damages absent a finding of
27 inducement, so PI should be judicially estopped from asserting it here.

28 Judicial estoppel "generally prevents a party from prevailing in one phase of a case on an

1 argument and then relying on a contradictory argument to prevail in another phase.” *New*
2 *Hampshire v. Maine*, 532 U.S. 742, 749 (2001) (citation omitted). For the doctrine to apply, “a
3 party’s later position must be clearly inconsistent with its earlier position.” *Id.* at 750–51. There
4 is no clear inconsistency here. In *Fairchild*, PI’s assertion that it is entitled to recover for foreign
5 losses relied on evidence in the record that the defendant “manufactured infringing chips in the
6 United States” and “offered infringing products to [customers] with the involvement of its U.S.
7 sales force, causing PI to drastically reduce its prices.” Docket No. 321, Exh. 7 at 2. That is,
8 domestic infringement caused the foreign losses. In contrast, there is no evidence in this case that
9 PI manufactured or sold accused chips within the United States. The only type of domestic
10 infringement Opticurrent has established on PI’s part is a small percentage of sales within the
11 United States. Opticurrent has presented no evidence that those sales caused it to suffer foreign
12 losses. PI’s position in *Fairchild* is not inconsistent with its position here. Judicial estoppel does
13 not apply.

14 Therefore, PI’s motion for judgment as a matter of law is **GRANTED** as to the royalty
15 base. The royalty base is adjusted to 6% of PI’s worldwide sales, *i.e.*, \$39,998,908.62. Multiplied
16 by the royalty rate of 3%, this produces a damages figure of \$1,199,967.26.

17 4. Royalty Rate

18 PI next asks the Court to reduce the 3% royalty rate awarded by the jury to 2%. PI Mot. at
19 4–5. The QBar license, which Opticurrent presented to the jury as a reference point for
20 determining the royalty rate, set a 3% rate for an exclusive license, but specified that “[i]n the
21 event the license granted hereunder is converted into a non-exclusive license . . . the percentage
22 royalty on Net Sales shall be reduced to two percent.” Trial Exhibit 2. PI argues that “Opticurrent
23 failed to introduce any evidence that the license resulting from the hypothetical negotiation in this
24 case would be exclusive,” and therefore that the 2% rate is appropriate. PI Mot. at 5.

25 Opticurrent does not dispute that, as a starting point, a royalty rate of 2% may have been
26 appropriate based on the non-exclusive rate in the QBar license. *See* Docket No. 321 at 11.
27 However, Opticurrent asserts that it is a “fair inference” that the jury decided to award a 3% rate in
28 light of the evidence Opticurrent adduced that the ’623 patent significantly improves on the ’323

1 patent that was the subject of the QBar license. *Id.* For instance, Mr. Congdon explained that the
2 '323 patent produced a "leakage current" that led to "standby energy waste," such that a product
3 containing the patented switch would "burn power all the time that it's plugged in" to a power
4 outlet. Tr. at 493:20–494:3. The '623 patent improved on the '323 patent by "stop[ping] that
5 energy waste." *Id.* at 494:3–7. Dr. Zane confirmed that the '323 patent had the "drawback" of
6 "leak[ing] current from . . . high voltage, and opined that the '623 patent represented an
7 improvement on the '323 patent because "a modification applied in the '623 [patent] . . . allows it
8 to avoid the problem . . . [of] having that leakage path through the device." Tr. at 296:8–297:4,
9 298:22–299:12. David Kung, PI's director of design engineering, provided additional context for
10 understanding the value of the improvements in the '623 patent when he explained that energy
11 efficiency is "actually the main advantage" of the design of PI's accused chips (which the jury
12 ultimately decided infringed the '623 patent). Tr. at 633:16–634:11. He informed the jury that
13 "people . . . want high efficiency, they pay a lot of extra money to get high efficiency," and in fact
14 "in the field in real-world power supplies," the "whole world is asking for [energy efficiency] right
15 now." *Id.* The testimony of Mr. Congdon, Dr. Zane, and Mr. Kung are substantial evidence of the
16 value of the '623 patent that support the jury's decision to award a higher royalty rate for that
17 patent than what was set forth in the QBar license.² *See Whitserve, LLC v. Computer Packages,*
18 *Inc.*, 694 F.3d 10, 26 (Fed. Cir. 2012) (jury awards are reviewed under the substantial evidence
19 standard).

20 PI counters that Opticurrent cannot use the 2% non-exclusive rate in the QBar license as
21 the baseline onto which to add the value of the improvements in the '623 patent. Docket No. 323
22 at 5–6. PI submits that using a 2% baseline would attribute value to the '323 patent, which
23

24 _____
25 ² The jury was instructed that it may consider the *Georgia-Pacific* factors in determining a
26 reasonable royalty rate. *See* Jury Instruction No. 36. Several of those factors bear directly on the
27 issue of discerning the value attributable to an improvement in a patent. For example, factor nine
28 refers to "[t]he utility and advantages of the patented property over the old modes or devices," and
factor thirteen refers to "[t]he portion of the realizable profits that should be credited to the
invention as distinguished from non-patented elements." *Id.*; *see AstraZeneca*, 782 F.3d at 1338
(noting that "the standard *Georgia-Pacific* reasonable royalty analysis takes account of the
importance of the inventive contribution in determining the royalty rate that would have emerged
from the hypothetical negotiation").

1 Opticurrent has not asserted against PI, and which had expired by the start of the damages period
2 in this case. Docket No. 323 at 5–6. Instead, PI argues that Opticurrent must isolate the value of
3 the improvement in the '623 patent (*i.e.*, the incremental value of the '632 patent over the '323
4 patent) and use only that value to calculate the royalty rate. *Id.*

5 PI is correct that in general, “the patent owner must apportion or separate the damages
6 between the patented improvement and the conventional components of the multicomponent
7 product” to “ensure[] that [the patent owner] is compensated for the patented improvement . . .
8 rather than the entire [product].” *Exmark Mfg. Co. Inc. v. Briggs & Stratton Power Prod. Grp.,*
9 *LLC*, 879 F.3d 1332, 1348 (Fed. Cir. 2018) (citations omitted); *see also Ericsson, Inc. v. D-Link*
10 *Sys., Inc.*, 773 F.3d 1201, 1233 (Fed. Cir. 2014) (“[T]he patent holder should only be compensated
11 for the approximate incremental benefit derived from his invention.”) (citing *Garretson v. Clark*,
12 111 U.S. 120, 121 (1884)). However, in reviewing the jury award, the Court must bear in mind
13 that “[t]he determination of a damage award is not an exact science,” *Del Mar Avionics, Inc. v.*
14 *Quinton Instrument Co.*, 836 F.2d 1320, 1327 (Fed. Cir. 1987), and when “the amount of the
15 damages cannot be ascertained with precision, any doubts regarding the amount must be resolved
16 against the infringer,” *Lam, Inc. v. Johns-Manville Corp.*, 718 F.2d 1056, 1065 (Fed. Cir. 1983).
17 Here, even assuming that no part of the royalty rate can be based on the technology taught by the
18 '323 patent, the evidence presented at trial about the importance of the energy efficiency
19 advantages of the '623 patent and the significant improvement of the '623 patent over the '323
20 patent was sufficient to support a jury awarding a 3% rate for the value of the improvement alone.

21 Accordingly, PI’s motion is **DENIED** with respect to the royalty rate.

22 5. Damages

23 PI next asks the Court to enter judgment as a matter of law that Opticurrent failed to prove
24 damages at trial, in several ways.

25 a. Apportionment and Entire Market Value Rule

26 First, PI protests that Opticurrent did not apportion damages between the infringing aspects
27 of PI’s products that are attributable to the value of the '623 patent and the noninfringing aspects
28 covered by the expired '323 patent. PI Mot. at 11. Apportionment is the well-established

1 principle that “where multi-component products are involved,” the “damages awarded for patent
2 infringement must reflect the value attributable to the infringing features of the product, and no
3 more.” *Commonwealth Sci. & Indus. Research Organisation v. Cisco Sys., Inc.*, 809 F.3d 1295,
4 1301 (Fed. Cir. 2015) (citations and internal quotation marks omitted). Apportionment requires
5 that a damages theory “must separate the value of the allegedly infringing features from the value
6 of all other features.” *Id.* (quoting *VirnetX, Inc. v. Cisco Sys., Inc.*, 767 F.3d 1308, 1329 (Fed. Cir.
7 2014)). At the most basic level, PI is correct that Opticurrent’s damages theory had to isolate the
8 value of the ’623 patent’s improvement on the ’323 patent, instead of conflating the worth of the
9 two, at least as to the period after the ’323 patent expired.

10 However, the Federal Circuit “recognizes that, under this apportionment principle, there
11 may be more than one reliable method for estimating a reasonable royalty.” *Id.* (citation and
12 internal quotation marks omitted). In this case, Opticurrent opted to invoke one such method of
13 apportionment. That method “values the asserted patent based on comparable licenses”—here, the
14 QBar license. *Id.* at 1303. To properly apportion under a comparable-license theory of damages,
15 a plaintiff must show that the license is in fact comparable by “account[ing] for differences in the
16 technologies and economic circumstances of the contracting parties.” *Finjan, Inc. v. Secure*
17 *Computing Corp.*, 626 F.3d 1197, 1211 (Fed. Cir. 2010). PI’s apportionment arguments thus are
18 properly directed to whether Opticurrent sufficiently established comparability between the QBar
19 license for the ’323 patent and the license that would have resulted from a hypothetical negotiation
20 for the ’623 patent. That question is addressed in the next section.

21 PI also makes the related argument that Opticurrent improperly relied on the entire market
22 value of the accused products by seeking damages as “a percentage of PI’s entire revenue or entire
23 average selling price.” PI Mot. at 11–12. “The entire market value rule is a narrow exception to
24 th[e] general rule” requiring apportionment. *LaserDynamics, Inc. v. Quanta Computer, Inc.*, 694
25 F.3d 51, 67 (Fed. Cir. 2012). Under the entire market value rule, “[i]f it can be shown that the
26 patented feature drives the demand for an entire multi-component product, a patentee may be
27 awarded damages as a percentage of revenues or profits attributable to the entire product.” *Id.*
28 (citation omitted). According to PI, Opticurrent invoked the entire market value rule because its

1 damages theory used PI's entire revenue as a royalty base.

2 This reasoning is at odds with the Federal Circuit's teaching in *Commonwealth* that the
3 entire market value rule is not implicated where apportionment is already built into the royalty rate
4 in a comparable license. In *Commonwealth*, the parties engaged in unsuccessful negotiations over
5 a license for the patent that eventually became the subject of the lawsuit. 809 F.3d at 1302–03.
6 The district court calculated damages using a royalty rate based on a per-unit royalty proposed
7 during the negotiations. *See id.* at 1300, 1303. On appeal, the Federal Circuit rejected the
8 defendant's contention that the district court erred in "not beginning its damages analysis with . . .
9 the smallest salable patent-practicing unit" of the defendant's product. *Id.* at 1301. The court
10 explained that, "[b]ecause the parties' discussions centered on a license rate for the [patent-in-
11 suit], this starting point for the district court's analysis *already built in apportionment*," such that
12 "the parties negotiated over the value of the asserted patent, and no more." *Id.* at 1303 (emphasis
13 added) (citation and internal quotation marks omitted). *Commonwealth* concluded that "otherwise
14 comparable licenses are not inadmissible solely because they express the royalty rate as a
15 percentage of total revenues, rather than in terms of the smallest salable unit." *Id.* (citing *Ericsson*,
16 773 F.3d at 1228); *see also Bio-Rad Labs., Inc. v. 10X Genomics, Inc.*, No. CV 15-152-RGA,
17 2018 WL 4691047, at *7 (D. Del. Sept. 28, 2018) (finding "no problem with using comparable
18 licenses to establish a reasonable royalty rate, without performing a separate apportionment
19 analysis, where there is a logical basis for doing so").

20 Here, Opticurrent's damages theory does not improperly invoke the entire market value
21 rule merely because it references a percentage of PI's total revenues. The Court explained as
22 much at the final pretrial conference:

23 MR. THORNBURGH: So what we're asking for, to be very precise,
24 is we're asking for the Court to exclude evidence of PI's total
25 accused revenue because they have not laid the foundation that the
26 Federal Circuit requires. They can't invoke the entire market value
rule because they don't even claim that this feature is the basis of
demand. They have failed to –

27 THE COURT: Well, I'm not sure that they're really seeking the
28 entire market theory. I mean, to the extent that -- if they're basing it
on a comparable license and putting aside factual questions whether
there's enough comparability here, you can sort of make a

1 reasonable case, normally, if something is a comparable license, as
2 the *Commonwealth-Cisco* case kind of points out, it sort of
incorporates an allocation as between patentability or patented and
non-patented elements.

3 So if the patented device is only a small part of whatever the unit is,
4 that's – that's going to be reflected in the fact that, instead of 70
5 percent or 50 percent or 25 percent royalty, it's a 2 percent or 1
percent. So, I mean, it's -- I don't necessarily see that they are
seeking the entire market value if they're trying to use the QBar
license, which was, what, 2 to 3 percent.

7 Docket No. 250 at 48:23–49:20. That is, the royalty rate in the QBar license could be used so long
8 as Opticurrent met its burden of “account[ing] for differences in the technologies and economic
9 circumstances of the contracting parties,” including the value of the invention relative to the value
10 of the whole product. *Finjan*, 626 F.3d at 1211.

b. Comparability of the QBar License

12 PI asserts that Opticurrent introduced no evidence to permit the jury to determine that the
13 QBar license is comparable considering that: (1) the products covered by the QBar license (“QBar
14 switches alone”) and PI’s accused products (“a combination of switch and power supply
15 controller”) are “very different”; (2) QBar was not commercially successful whereas PI had
16 revenues of over \$600 million for the accused products; and (3) Mr. Congdon owned QBar with a
17 friend at the time he entered the licensing agreement with QBar, whereas Opticurrent and PI are
18 competitors. PI Mot. at 9–10.

19 PI raised the same objections at trial. Tr. at 661:14–17 (Opticurrent “completely failed to
20 show the comparability of the QBar license” and therefore had laid “no foundation” for the
21 proposed royalty rate). However, the Court ruled that “there is a basis for [a royalty rate] because
22 there was testimony about QBar.” *Id.* at 660:6–9; *see id.* at 663:6–11. And while there was “not
23 much more testimony in terms of comparing and how much more valuable it is and how you
24 quantify that,” the Court noted that those questions fell within the “province of the jury.” *Id.* at
25 660:10–13. While not robust, the record shows that Opticurrent *did* provide a basis for the jury to
26 compare the QBar license and the hypothetical license for the ’623 patent, and to account for the
27 differences PI lists above in calculating damages.

First, there was evidence about the distinction between the products covered by the QBar-

1 license and PI's accused products.³ The QBar license covers only the "QBar Switch," which is the
2 three-terminal switch that is the subject of the '323 patent. *See Trial Exhibit 2 § 2 ("QBAR*
3 *Switch' means Three-Terminal Noninverting Transistor Switch as disclosed, claimed, and covered*
4 *by U.S. Patent #5,134,323.").* Thus, under the QBar license Mr. Congdon received 3% of the
5 value of the switch itself. *See id.* ("Net Sales' means the sum of Licensee's and Sublicensee's
6 invoiced sales of QBAR Switches . . ."). PI characterizes its accused products as containing
7 more components than just the switch claimed in the '623 patent. The accused products "are not
8 themselves the accused 'three-terminal transistor switches,'" but rather larger semiconductor chips
9 that contain "thousands of three-terminal transistors that form the internal circuitry." Docket No.
10 12 at 4–5.

11 Had Opticurrent failed to address this distinction with the jury, there may well have been
12 an apportionment problem, because under the QBar license Opticurrent would have received 3%
13 of the value of each *switch* the licensee produced, whereas multiplying the total revenue for PI's
14 accused products by 3% would suggest that the jury awarded Opticurrent 3% of the value of each
15 *chip* PI produced. However, the jury was presented with documentary evidence and testimony
16 that the accused products included more than just a switch. Brad Brunell, Opticurrent's managing
17 member, testified that the QBar license covered only the "QBar switch[,] . . . a three terminal
18 noninverting transistor switch claimed and covered by the '323." Tr. at 435:21–436:4. Mr. Kung
19 then testified at length that PI's accused products consist of an "intelligent circuit" (or "brain") *in*
20 *addition to* a switch, and that the brain, rather than the switch, "dominates the energy efficiency"
21 capabilities of the accused products. *Id.* at 556:23–558:6 (testifying that "[w]ithout the brain, the
22 switch itself cannot do anything," and that "the energy efficiency of the chip is mainly determined
23 by the brains and not the switch"); *see also id.* at 559:5–13 (testifying that the "brain" is an
24 innovation that PI has its own patent on). Mr. Kung identified the additional circuitry to the jury
25 by reference to circuit diagrams for the accused products. *See id.* at 558:11–559:13. Indeed, PI
26

27 ³ There is no dispute that the '323 patent and the '623 patent are closely related technologically.
28 *See, e.g.*, Tr. at 510:19–23 (Congdon testifying on cross-examination that "[t]he '323 is the core of
the '623.").

1 later told the Court that “evidence has come in from trial[] [that] the QBar license was for a
2 switch, and the accused products are a switch plus the brains, the controller.” *Id.* at 661:14–20. In
3 other words, the jury was aware that the QBar switches were not identical to PI’s accused
4 products.

5 Second, Opticurrent presented evidence about the magnitude of QBar’s commercial
6 operations and their comparability to PI’s operations. Mr. Congdon testified that QBar
7 “manufactured and sold parts for Ford Motor Company, for IBM, for MIT, and several other
8 customers, mostly power supply people.” *Id.* at 501:5–10. He acknowledged that he was initially
9 only able to “sell our QBar switches with some amount of success” and “was struggling,” but later
10 “got a major customer, Welch Allyn, a medical equipment manufacturer, who started buying these
11 things in significant quantities.” *Id.* at 502:2–21. Mr. Brunell also testified that the QBar license
12 was “similar to the type of licenses [he] would negotiate at Microsoft,” where he had previously
13 worked in managing intellectual property. *Id.* at 436:18–437:2. He recounted that at Microsoft,
14 he “would negotiate either the acquisition of small companies, or sometimes bigger companies, to
15 get intellectual property rights, or . . . would license technologies from third parties.” *Id.* at 416:6–
16 19. The jury thus heard evidence about the ways in which QBar could be considered similar to PI
17 in terms of licensing practices as well as the ways in which QBar differed from PI.

18 Finally, the jury heard evidence regarding the nature of negotiations that culminated in the
19 QBar license. Mr. Congdon testified that he co-owned QBar with a friend when he entered into a
20 license with the company. *See id.* at 500:4–8 (Congdon testifying that he formed QBar with “[a]
21 friend of mine, David Tralevin”), 511:17–512:6 (Congdon testifying that he and Tralevin each
22 owned 50% of QBar, and “the QBar license agreement was entered into between [Congdon], on
23 the one hand, and QBar, on the other hand”). When cross-examining Mr. Brunell, PI questioned
24 whether the QBar license was the product of arm’s-length negotiations. *See id.* at 451:14–24 (“Q.
25 Well, is it fair to say you don’t know whether the agreement between Mr. Congdon and QBar was
26 arm’s length? A. Uhm, I believe it was arm’s length enough, based on the conditions.”). This
27 evidence that “[the patentee] did not compete with the licensee as it did with [PI] in the case” was
28 sufficient to “permit[] the jury to properly discount the . . . license.” *Finjan*, 626 F.3d at 1212. On

1 the other hand, the jury also heard evidence that Mr. Congdon was not the solely decisionmaker at
2 QBar—the co-owner had to agree. *See* Tr. at 500:22–501:4. Mr. Congdon also testified that the
3 royalty rates were suggested by a seemingly neutral party—an attorney retained by QBar with
4 experience in licensing in the semiconductor industry. *Id.* at 501:11–20.

5 Thus, PI is mistaken to claim that Opticurrent introduced no evidence as to the differences
6 between the QBar license and the hypothetical license between Opticurrent and PI. To be sure,
7 “[w]hen relying on licenses to prove a reasonable royalty, alleging a loose or vague comparability
8 between different technologies or licenses does not suffice.” *Virnetx, Inc. v. Cisco Sys., Inc.*, 767
9 F.3d 1308, 1330 (Fed. Cir. 2014) (citation omitted). “However, we have never required identity of
10 circumstances; on the contrary, we have long acknowledged that any reasonable royalty analysis
11 necessarily involves an element of approximation and uncertainty.” *Id.* (citation and internal
12 quotation marks omitted). In light of the evidence summarized above, it cannot be said that
13 Opticurrent alleged merely “a loose or vague comparability”; it has done enough to provide the
14 jury with a basis to evaluate the comparability of the QBar license and the hypothetical negotiation
15 in this case. *See id.* (upholding damages award where the challenged licenses were
16 technologically related, and “all of the other differences . . . complain[ed] of were presented to the
17 jury, allowing the jury to fully evaluate the relevance of the licenses”). Presumably, aware of the
18 trial evidence on these points, the jury also considered the value of the technology taught by the
19 ’623 in arriving at a reasonable royalty rate of 3%.

20 PI faults Opticurrent for failing to *quantify* the differences between the QBar license and
21 the hypothetical license, and that the jury could not have reliably accounted for those differences
22 in determining a reasonable royalty rate. For the proposition that a comparability analysis must be
23 supported by quantitative evidence, PI cites *LaserDynamics, Inc. v. Quanta Computer, Inc.*, 694
24 F.3d 51 (Fed. Cir. 2012). However, the Federal Circuit in *LaserDynamics* refused to allow a
25 patentee to rely on two licenses to establish a royalty rate not for a lack of quantitative evidence,
26 but because the licenses were not comparable to begin with. As the court explained, the two
27 purportedly comparable licenses “did not involve the [patent-in-suit], and no evidence shows that
28 it even involves [a similar technology].” *LaserDynamics*, 694 F.3d at 80. The royalty rate in the

1 two licenses was therefore “untethered from the patented technology at issue.”⁴ *Id.* at 81.

2 *Minks v. Polaris Indus., Inc.*, No. 605CV-1894-ORL-31KRS, 2009 WL 3028994 (M.D.
3 Fla. Sept. 17, 2009), cited by Opticurrent, is more apposite. There, as here, the inventor licensed
4 the patented technology to a company with which he was affiliated. *Id.* at *1 n.1. Based on the
5 royalty rate in that license, the jury arrived at a royalty rate for the hypothetical license between
6 the inventor and the defendant. *Id.* at *2. The court acknowledged that “the evidence [introduced
7 by the inventor] supporting these royalty figures was vague and imprecise,” but nevertheless
8 upheld the damages verdict against the defendant’s challenge that the rate determined by the jury
9 was “speculative.” *Id.* at *4. The court explained that “a hypothetical royalty negotiation . . . is
10 inherently speculative in nature” and that “the factual determination of a reasonable royalty
11 ‘frequently is not supported by the specific figures advanced by either party.’” *Id.* (quoting
12 *Smithkline Diagnostics, Inc. v. Helena Laboratories Corp.*, 926 F.2d 1161, 1667 (Fed. Cir. 1991)).
13 Because the inventor had presented some “evidence of the relationship between [the inventor] and
14 [the licensing company], the relationship and dealings between [the inventor] and [the defendant],
15 and various royalty arrangements over time,” the jury could reasonably have reached a decision as
16 to the appropriate royalty rate to award. *Id.* The Federal Circuit affirmed the district court’s
17 ruling. *Minks v. Polaris Indus., Inc.*, 404 F. App’x 497 (Fed. Cir. 2010).

18 Here, the evidence presented to the jury regarding the comparability of the QBar license
19 was more fulsome than that deemed adequate in *Minks*. At the end of the day, “the fact that a
20 license is not perfectly analogous generally goes to the weight of the evidence, not its

21

22 ⁴ PI cites two other cases in which courts have vacated damages awards premised on royalty rates
23 derived from purportedly comparable licenses. Like *LaserDynamics*, however, both rulings were
24 animated by a fundamental lack of comparability. In *ResQNet.com, Inc. v. Lansa, Inc.*, 594 F.3d
25 860 (Fed. Cir. 2010), the patentee’s expert “used licenses with no relationship to the claimed
26 invention to drive the royalty rate up to unjustified double-digit levels.” *Id.* at 870. And in *Lucent
27 Techs., Inc. v. Gateway, Inc.*, 580 F.3d 1301 (Fed. Cir. 2009), the flaws in the patentee’s license
28 theory were manifold: the scopes of the challenged licenses were “vastly different”; the
technology covered by some of the challenged licenses was described only vaguely as “PC-
related,” making it “impossible . . . to determine whether the agreements are at all comparable,”
and the patentee did not even mention “the subject matter or patents covered” by the remaining
licenses; and the patentee pushed for lump-sum damages even though many of the challenged
licenses were not lump-sum agreements at all. *Id.* at 1327–32. Opticurrent has provided markedly
more evidence regarding the QBar license than the bare showings made in *ResQNet.com* and
Lucent Technologies.

1 admissibility,” *Ericsson*, 773 F.3d at 1227, and “[d]espite potential flaws in [Opticurrent]’s
2 damages theory, the jury was entitled to hear the [evidence] and decide for itself what to accept or
3 reject,” *Finjan*, 626 F.3d at 1212 (citation, internal quotation marks and alterations omitted). The
4 jury, having heard competing evidence, did exactly that here in extrapolating a royalty rate based
5 on the QBar license, and the 3% rate it awarded was “within the range encompassed by the record
6 as a whole.” *Unisplay, S.A. v. Am. Elec. Sign Co.*, 69 F.3d 512, 519 (Fed. Cir. 1995).

c. Infringing Configuration

8 PI finally argues that Opticurrent's damages theory is deficient because it relied on "import
9 rates for PI's chips in general" without specifying whether all the power supply units imported
10 into the United States "that include an accused product are built in an allegedly infringing
11 configuration." PI Mot. at 12. PI does not elaborate on this point, but it appears to be suggesting
12 that a larger product can incorporate PI's accused chips—which the jury determined to be
13 infringing—and yet still be built in a configuration that is not infringing. But PI does not point to
14 any evidence it introduced tending to show that the products containing the accused chips are *not*
15 built in an "infringing configuration." In any event, to the extent PI's contention is that damages
16 should not be awarded for infringing products imported by third-party manufacturers, that
17 argument is moot because the royalty base has now been adjusted to exclude those products.

Accordingly, PI's motion for judgment as a matter of law on damages is **DENIED**.

19 B. Opticurrent's Motion for Judgment as Matter of Law on Inducement

20 Opticurrent argues that the jury's verdict that PI did not induce infringement of the '623
21 patent is incorrect and asks the Court to grant judgment as a matter of law on inducement or, in the
22 alternative, a new trial. Docket No. 303 at 1.

23 | P a g e

1. Waiver

24 PI contends that, as a threshold matter, Opticurrent cannot seek a Rule 50(b) judgment on
25 inducement because it did not make a motion under Rule 50(a) on the issue before the case was
26 submitted to the jury. Docket No. 304 at 5–6. “As explicitly stated in the Rule, a Rule 50(b)
27 motion may be considered only if a Rule 50(a) motion for judgment as a matter of law has been
28 previously made.” *Tortu v. Las Vegas Metro. Police Dep’t*, 556 F.3d 1075, 1081 (9th Cir. 2009).

1 Opticurrent concedes that it never explicitly sought a Rule 50(a) ruling on induced infringement,
2 but maintains that it “made a timely oral Motion in accordance with Rule 50(a) before the close of
3 evidence.” Docket No. 317 at 4. Namely, when PI rested its case, counsel for Opticurrent stated:
4 “At this time we have a motion under Rule 50 on Power Integrations’ case.” Tr. at 783:17–18.
5 This so-called “oral motion” does not save Opticurrent’s inducement claim. For one thing, it was
6 clearly referencing the written motion for judgment as a matter of law Opticurrent filed on
7 February 12, 2019 (and the only such motion Opticurrent filed during the trial). *See* Docket No.
8 238. That written motion stated expressly that Opticurrent was only moving for judgment on PI’s
9 “counterclaim and affirmative defense of invalidity.” *Id.* at 2 (citations omitted). The impression
10 that Opticurrent was moving for judgment only on the issue of invalidity is reinforced by its
11 counsel’s statement that “[w]e’re going to have a JMOL motion on validity.” Tr. at 755:21–22.
12 Nowhere did Opticurrent indicate that it was moving on the issue of inducement.

13 Undeterred, Opticurrent insists that its oral statement that “we have a motion under Rule
14 50 on Power Integrations’ case” is sufficiently specific to preserve its inducement claim under
15 Rule 50(a). But a Rule 50(a) “motion must specify the judgment sought and the law and facts that
16 entitle the movant to the judgment.” Fed. R. Civ. P. 50(a)(2). The Ninth Circuit has emphasized
17 that “a proper post-verdict Rule 50(b) motion is limited to the grounds asserted in the pre-
18 deliberation Rule 50(a) motion.” *Go Daddy*, 581 F.3d at 961. Opticurrent’s oral motion did not
19 assert inducement as a ground for judgment nor specify the law and facts that would entitle it to
20 judgment on inducement. To be sure, Rule “50(b) may be satisfied by an ambiguous or inartfully
21 made motion for a directed verdict.” *Reeves v. Teuscher*, 881 F.2d 1495, 1498 (9th Cir. 1989).
22 Even so, Opticurrent is not absolved of responsibility to at least identify the particular legal issue
23 on which its motion is based. *See Cisco Sys. Inc. v. Arista Networks, Inc.*, No. 14-CV-05344-BLF,
24 2017 WL 4771009, at *10 (N.D. Cal. May 10, 2017) (observing that “[w]hile Rule 50(b) may be
25 satisfied by an ambiguous or inartfully made motion, the argument in some form still needs to be
26 made,” and finding that movant forfeited Rule 50(b) issue where it “made no mention” of the issue
27 in its Rule 50(a) motion); *Cotton ex rel. McClure v. City of Eureka, Cal.*, 860 F. Supp. 2d 999,
28 1010 (N.D. Cal. 2012) (declining to apply *Reeves* to allow moving party to make Rule 50(b)

1 motion on one particular claim where the party “ma[de] a Rule 50(a) motion in which they chose
2 to challenge Plaintiffs’ [other] claim *only*” (emphasis in original).

3 Accordingly, Opticurrent has waived its Rule 50(b) challenge to the jury’s induced
4 infringement verdict.

5 2. Merits

6 In any event, Opticurrent’s motion would fail on the merits. As the Court instructed the
7 jury, “[i]n order to be liable for inducing infringement, Power Integrations must: (1) have
8 intentionally taken action that actually induced direct infringement; (2) have been aware of the
9 ’623 patent; and (3) have known that the acts it was causing would infringe the patent.” Jury
10 Instruction No. 33. With respect to the third element, “Power Integrations may be considered to
11 have known that the acts it was causing would infringe the ’623 patent if it subjectively believed
12 there was a high probability that the direct infringer’s product infringed the patent, in other words,
13 willfully blinded itself to the infringing nature of the direct infringer’s act.” *Id.*

14 PI does not dispute Opticurrent established the first two elements.⁵ However, PI contends
15 that the jury could reasonably have concluded, based on evidence presented at trial, that PI did not
16 know the acts it was causing would infringe the ’623 patent. Docket No. 304 at 2–4. PI is correct.
17 At trial, Cliff Walker, who oversees intellectual property and legal affairs at PI, testified that upon
18 reviewing the ’623 patent after the suit was filed, he believed that PI’s products did not infringe
19 the patent because “it was describing only a three-terminal device,” whereas PI’s “products from
20 2006 had gone to four-terminal devices.” Tr. at 518:6–9, 530:3–21. Walker testified that his
21 conclusion regarding noninfringement remained the same after the Court construed the ’623 patent
22 to cover four-terminal switches in which the fourth terminal was not connected to a power supply,
23 because he understood PI’s products to feature a fourth terminal connected to a power supply. *Id.*
24 at 530:22–531:16. Walker consulted Michael Matthews, an engineer who is PI’s vice product of
25 development, before reaching this conclusion. *Id.* at 533:1–11. David Kung, PI’s director of
26

27

28 ⁵ As to the second element, Opticurrent only seeks damages for induced infringement “as of the
date of commencement of this litigation,” when PI became aware of the ’623 patent. Docket No.
303 at 4.

1 design engineering, testified similarly. He stated that initially, he believed PI's products "do not
2 infringe" because "they claim three terminals" and "[w]e use four." *Id.* at 596:7-12. After the
3 Court's claim construction, he maintained the same belief because PI products "have the power
4 supply terminal" connected to the fourth terminal "and that is very different from claim 1." *Id.* at
5 596:12-23.

6 Opticurrent nevertheless contends that the evidence showed PI was willfully blind.
7 Opticurrent points to the fact that Walker and Kung did not consult each other before reaching
8 their individual determinations of noninfringement, that Kung admitted he did not initially peruse
9 the '623 parent but merely "glanced" through it, and that PI never produced Matthews as a trial
10 witness. However, Opticurrent made these same points to the jury, and the verdict reflects that the
11 jury simply credited the testimony of Mr. Walker and Mr. Kung testimony that PI genuinely
12 believed it was not infringing over Opticurrent's competing evidence. Opticurrent has not
13 demonstrated that a finding of induced infringement was the "only one" permitted by the
14 evidence, *Barnard*, 721 F.3d at 1075, or that the jury's verdict is "contrary to the clear weight of
15 the evidence," *4.0 Acres of Land*, 175 F.3d at 1139.

16 Accordingly, Opticurrent's motion for judgment as a matter of law on induced
17 infringement is **DENIED**.

18 C. Opticurrent's Motion for Supplemental Judgment on Excluded Products

19 At trial, Opticurrent argued to the jury that certain products⁶ within four of PI's product

21 ⁶ These products are as follows:

22 • Within the LNK585 and LinkZero-AX Family: the LNK584DG, LNK584GG,
LNK585DG, LNK585GG, LNK586DG, and LNK586DG.
23 • Within the LNK605 and LinkSwitch-II Family: the LNK603PG/DG, LNK613PG/DG,
LNK604PG/DG, LNK614PG/DG, LNK605PG/DG, LNK615PG/DG, LNK606PG/DG,
LNK616PG/DG, and LNK632DG.
24 • Within the TNY179 and TinySwitch-LT Family: the TNY174PN, TNY175PN,
TNY176PN, TNY177PN, TNY178PN, TNY179PN, and TNY180PN.
25 • Within the TNY277 and TinySwitch III Family: the TNY274P, TNY274G, TNY275P,
TNY275G, TNY276P, TNY276G, TNY277P, TNY277G, TNY278P, TNY278G,
TNY279P, TNY279G, TNY280P, and TNY280G.

28 Docket No. 239, Exh. A (Opticurrent's expert report on infringement).

1 families infringed the '623 patent. The jury agreed, entering a verdict for Opticurrent on
2 infringement. Opticurrent now moves the Court to enter "supplemental judgment" in its favor and
3 rule that other PI products which the Court expressly excluded from the trial (the "Excluded
4 Products")⁷ also infringe the '623 patent and that Opticurrent is entitled to damages on those
5 products. Docket No. 298 at 1. Opticurrent's motion is both procedurally improper and
6 substantively meritless.

7 This district's Patent Local Rules require a party claiming patent infringement to serve on
8 the defendant a "Disclosure of Asserted Claims and Infringement Contentions," which "shall
9 contain":

10 (b) Separately for each asserted claim, *each* accused apparatus,
11 product, device, process, method, act, or other instrumentality
12 ("Accused Instrumentality") of each opposing party of which the
13 party is aware." *This identification shall be as specific as possible.*
14 *Each product, device, and apparatus shall be identified by name or*
15 *model number, if known.* Each method or process shall be identified
16 by name, if known, or by any product, device, or apparatus which,
17 when used, allegedly results in the practice of the claimed method or
18 process;
19
20 N.D. Cal. Pat. L.R. 3-1(b) (emphasis added). "Rule 3-1(b) does not permit parties to identify
21 accused products by using categorical or functional identifications, or limited, representative
22 examples." *Geovector Corp. v. Samsung Elecs. Co.*, No. 16-CV-02463-WHO, 2017 WL 76950,
23 at *4 (N.D. Cal. Jan. 9, 2017). Rather, "a full list of accused products must be disclosed as part of
24 a party's infringement contentions." *Oracle Am., Inc. v. Google Inc.*, No. 10-c-03561-WHA, 2011
25 WL 4479305, at *3 (N.D. Cal. Sept. 26, 2011).

26
27 In this case, Opticurrent's expert report on infringement specifically listed the PI products
28 that it alleged infringed the '623 patent. *See* Docket No. 239, Exh. A. The Excluded Products
were not listed. Opticurrent's infringement contentions and claim charts likewise did not
specifically identify the Excluded Products. *See* Docket No. 64-3. Then, shortly before trial
opened, Opticurrent sought to file a trial exhibit summarizing of PI's revenues in which, for the

27
28
7 The Excluded Products are: DAP021, SC1011, SC1128, SC1129, SC1138, TNY375, TNY376,
TNY377, TNY378, TNY379, TNY380, DAP021, LNK623, LNK624, LNK625, LNK626,
SC1097, SC1098, SC1099, SC1103, SC1104, SC1106, SC1125, SC1126, SC1132, SC1135,
SC1139, LNK574, LNK576, and SPS1013P-TL. Docket No. 298-2.

1 first time, the Excluded Products were listed as accused products. *See* Docket No. 235 at 2. The
2 Court ordered briefing to address whether the newly-listed products were admissible. *See id.* In
3 its responsive brief, Opticurrent did not dispute that the Excluded Products were not specified in
4 its infringement contentions, but argued that it had from the beginning alleged infringement with
5 respect to certain product *families* “and any other similarly structured or functioning products”;
6 that PI was aware of the scope of the infringement contentions and did not object; and that
7 Opticurrent’s revenue summaries were based on financial information provided by PI which
8 included all products within the accused product families, and not just the specific products listed
9 in Opticurrent’s infringement contentions. Docket No. 237.

10 After considering the parties’ briefing, the Court ruled as follows:

11 Products PI listed as newly accused . . . are inadmissible. There were
12 not specifically disclosed in infringement contentions on
13 Opticurrent’s expert’s report. Plaintiff is required to remove non-
14 accused products from the summaries and recalculate accordingly.
15 Plaintiff does not effectively dispute these products belong to
16 families different from the enumerated accused products; nor does
17 plaintiff dispute the schematics of the circuitry of these products
18 differ from that of the accused products.

19 Docket No. 264 at 1.

20 Opticurrent’s present motion seeks to relitigate the issue. Its arguments are substantially
21 identical to the ones made in its pre-trial brief. Namely, Opticurrent asserts that it has always
22 accused PI’s entire product families and similar products of infringement, that PI was aware of the
23 scope of those allegations and did not object until shortly before trial, and that the financial
24 information PI had provided to Opticurrent included all products within the accused product
25 families. Docket No. 298 at 1–5. Opticurrent’s motion also argues, by reference to PI’s
26 datasheets, that the Excluded Products have the same components and functionality as the accused
27 products, *id.* at 5–10, even though the Court had found prior to trial that “Plaintiff does not
28 effectively dispute these [Excluded Products] belong to families different from the enumerated
accused products; nor does plaintiff dispute the schematics of the circuitry of these products differ
from that of the accused products,” Docket No. 264 at 1.

In short, Opticurrent is asking the Court to reconsider its pre-trial ruling excluding the

1 newly-accused products. *See* N.D. Cal. Civ. L.R. 7-9(a) (“Before the entry of a judgment . . . , any
2 party may make a motion before a Judge requesting that the Judge grant the party leave to file a
3 motion for reconsideration of any interlocutory order . . . ”). However, Local Rule 7-9(b) requires
4 that a motion for reconsideration must be based on either “a material difference in fact or law . . .
5 from that which was presented to the Court before entry of the interlocutory order,” the
6 “emergence of new material facts or a change of law occurring after the time of such order,” or
7 “[a] manifest failure by the Court to consider material facts or dispositive legal arguments which
8 were presented to the Court before such interlocutory order.” Opticurrent’s motion is not based on
9 any of these three grounds. To the contrary, it simply recycles arguments the Court already
10 rejected in its prior ruling. *See* N.D. Cal. Civ. L.R. 7-9(c) (“No motion for leave to file a motion
11 for reconsideration may repeat any oral or written argument made by the applying party in support
12 of or in opposition to the interlocutory order which the party now seeks to have reconsidered.”).

13 Instead of conforming its motion to the standard required for reconsideration, Opticurrent
14 insists that is entitled to recover damages for the Excluded Products as long as it can show that
15 those products are “not colorably different” from the accused products determined to be infringing
16 at trial. *See* Docket No. 298 at 11–12. Opticurrent is incorrect. The “not colorably different” test
17 is applied in the context of “evaluating whether an injunction against continued infringement has
18 been violated by a newly accused product.” *Proveris Scientific Corp. v. Innovasystems, Inc.*, 739
19 F.3d 1367, 1370 (Fed. Cir. 2014). Some courts have also applied the same test to determine
20 whether a prevailing plaintiff should be awarded ongoing royalty on newly-accused products that
21 were developed subsequent to the filing of the infringement action. *See, e.g., Apple Inc. v.*
22 *Samsung Elecs. Co.*, No. 12-CV-00630-LHK, 2018 WL 905943, at *8–10 (N.D. Cal. Feb. 15,
23 2018) (applying test to defendant’s products that were allegedly “designed around” the infringed
24 patent); *Fractus, S.A. v. Samsung Elecs. Co.*, No. 6:12-CV-421, 2012 WL 13042583, at *2 (E.D.
25 Tex. Dec. 26, 2012) (applying test to defendant’s products that were purportedly based on
26 “completely different designs” than the infringing products). Opticurrent, however, cannot point
27 to a single instance where the “not colorably different” test was used to determine whether *past*
28 royalty should be awarded on products that *already existed* when the plaintiff brought suit but

1 were not included in the infringement contentions, much less on products that the court had
2 expressly excluded from the plaintiff's infringement claims.

3 Accordingly, Opticurrent's motion for supplemental judgment on the Excluded Products is
4 **DENIED.**

5 D. Opticurrent's Motion for Ongoing Royalty

6 “A damages award for pre-verdict sales of the infringing product does not fully
7 compensate the patentee because it fails to account for post-verdict sales.” *Fresenius USA, Inc. v.*
8 *Baxter Intern., Inc.*, 582 F.3d 1288, 1303 (Fed. Cir. 2009). Thus, “[t]he award of an ongoing
9 royalty instead of a permanent injunction to compensate for future infringement is appropriate in
10 some cases.” *Bard Peripheral Vascular, Inc. v. W.L. Gore & Assocs., Inc.*, 670 F.3d 1171, 1192
11 (Fed. Cir. 2012) (citations omitted). Here, in lieu of an injunction against PI, Opticurrent requests
12 ongoing royalty on PI’s infringing products to be awarded at a rate of 5%, rather than the 3% rate
13 set by the jury for past infringement. Docket No. 295 (“Royalty Mot.”) at 1. Citing *Amado v.*
14 *Microsoft Corp.*, 517 F.3d 1353 (Fed. Cir. 2008), Opticurrent claims that a higher ongoing royalty
15 rate is warranted because “[t]here is a fundamental difference . . . between a reasonable royalty for
16 pre-verdict infringement and damages for post-verdict infringement.” *Id.* at 1361.

17 Opticurrent’s argument implicates a somewhat unsettled area of the law. In *Amado*, the
18 Federal Circuit rejected an infringing defendant’s contention that ongoing royalty may not be
19 awarded at a higher rate than the royalty rate determined by the jury for past infringement. *Id.*
20 The court reasoned that “[p]rior to judgment, liability for infringement, as well as the validity of
21 the patent, is uncertain, and damages are determined in the context of that uncertainty. Once a
22 judgment of validity and infringement has been entered, however, the calculus is markedly
23 different because different economic factors are involved.” *Id.* at 1362. In particular, the
24 defendant in that case had been “enjoined from further infringing activity yet was permitted to
25 continue only by virtue, and with the imprimatur, of [a] court-ordered stay” on the permanent
26 injunction. *Id.* *Amado* concluded that “[w]hen a district court concludes that an injunction is
27 warranted, but is persuaded to stay the injunction pending an appeal, the assessment of damages
28 for infringements taking place after the injunction should take into account the change in the

1 parties' bargaining positions, and the resulting change in economic circumstances, resulting from
2 the determination of liability." *Id.*

3 Subsequently, in *ActiveVideo Networks, Inc. v. Verizon Commc'ns, Inc.*, 694 F.3d 1312
4 (Fed. Cir. 2012), the Federal Circuit relied on *Amado* to affirm an award of an ongoing royalty rate
5 that was higher than the rate applied to pre-verdict infringement. *Id.* at 1342. In *ActiveVideo*, as
6 in *Amado*, the ongoing royalty was awarded after the court had stayed a permanent injunction
7 against further infringement. *See id.*

8 PI argues, and some district courts have surmised, that the Federal Circuit's approval of a
9 higher post-verdict royalty rate in *Amado* and *ActiveVideo* was limited to situations in which the
10 patent holder had secured a permanent injunction against the infringer. *See* Docket No. 308 at 1–
11 3. These courts have interpreted the difference in pre- and post-verdict bargaining power
12 referenced in *Amado* as being "largely due to the threat of an injunction." *Presidio Components*
13 *Inc. v. Am. Tech. Ceramics Corp.*, No. 08-CV-335-IEG NLS, 2010 WL 3070370, at *4 (S.D. Cal.
14 Aug. 5, 2010) (citation omitted), *aff'd in part, vacated in part on other grounds*, 702 F.3d 1351
15 (Fed. Cir. 2012). Under that view, where a "permanent injunction [is] off the table, the bargaining
16 positions of a willing patentee and infringer are substantially the same as they would have been at
17 the time the infringement began," because in "determining the reasonable royalty rate during trial,
18 both parties assume[] the . . . patent *was valid and infringed*." *Id.* (emphasis in original); *see, e.g.*,
19 *Univ. of Pittsburgh of Com. Sys. of Higher Educ. v. Varian Med. Sys., Inc.*, No. 08CV1307, 2012
20 WL 1436569, at *11–12 (W.D. Pa. Apr. 25, 2012) (same), *aff'd in part, vacated in part on other*
21 *grounds*, 561 F. App'x 934 (Fed. Cir. 2014); *Erfindergemeinschaft UroPep GbR v. Eli Lilly &*

22 Co., No. 2:15-CV-1202-WCB, 2017 WL 3034655, at *4–5 (E.D. Tex. July 18, 2017) (same).
23 Because Opticurrent has not sought an injunction here, PI argues that a higher ongoing royalty rate
24 is not justified.

25 However, the Federal Circuit has recently reiterated, in a case in the patentee's request for
26 injunctive relief was denied, that "[w]hen patent claims are held to be not invalid and infringed,
27 this amounts to a 'substantial shift in the bargaining position of the parties.'" *XY, LLC v. Trans*
28 *Ova Genetics*, 890 F.3d 1282, 1290, 1297 (Fed. Cir. 2018) (quoting *ActiveVideo*, 694 F.3d at

1 1342). Further, in *Arctic Cat Inc. v. Bombardier Recreational Prod. Inc.*, 876 F.3d 1350 (Fed.
2 Cir. 2017), the court affirmed the district court's decision to award an ongoing royalty rate that
3 was double the jury rate, even though no injunctive relief was sought or granted. *Id.* at 1370.
4 Notably, the district court expressly rejected the argument Opticurrent makes here that the
5 bargaining position between parties in an infringement suit does not change post-verdict unless an
6 injunction is entered. See *Arctic Cat Inc. v. Bombardier Recreational Prod., Inc.*, No. 14-CV-
7 62369, 2017 WL 7732873, at *3 n.3 (S.D. Fla. Jan. 3, 2017). The district court observed that,
8 even if the royalty rate set by the jury already assumes patent validity and infringement, once a
9 verdict is entered in favor of the patent holder, any continuing infringement by the defendant is
10 willful, which potentially subjects the defendant to enhanced damages. *Id.* at *3. However, the
11 higher ongoing royalty rate in *Arctic Cat* was not based solely on the patentee's stronger post-
12 verdict bargaining position. The patentee also made a strong showing on several other *Georgia-
13 Pacific* factors. See *id.*

14 Here, even though Opticurrent has not sought injunctive relief, PI's counsel conceded at
15 the hearing that PI faces some degree of risk going forward by virtue of the fact that its post-
16 verdict infringement may be deemed willful. There is thus a basis to award Opticurrent an
17 ongoing royalty rate higher than 3%. However, the 5% rate Opticurrent asks for is excessive,
18 particularly since it has not made a showing on any other *Georgia-Pacific* factor. Moreover, while
19 Opticurrent's position is strengthened by the possibility that PI may face treble damages for
20 willful infringement, the award of enhanced damages is not mandatory; "district courts have
21 discretion to 'increase damages up to three times the amount found or assessed.'" *Presidio
22 Components, Inc. v. Am. Tech. Ceramics Corp.*, 875 F.3d 1369, 1382 (Fed. Cir. 2017) (quoting 35
23 U.S.C. § 284). On balance, the Court finds that an ongoing royalty rate of 3.5% adequately
24 compensates Opticurrent for its stronger post-verdict bargaining position.

25 Accordingly, Opticurrent's motion for ongoing royalty is **GRANTED** at the rate of 3.5%.

26 E. Opticurrent's Motion for Prejudgment and Postjudgment Interest

27 Opticurrent seeks an award for prejudgment interest on the jury award, calculated using
28 California's statutory interest rate from the date of the first infringement through the date of

1 judgment and compounded quarterly, as well as postjudgment interest. Docket No. 296 at 1.

2 1. Prejudgment Interest

3 Under 35 U.S.C. § 284, a patentee who prevails in an infringement action is entitled to
4 “damages adequate to compensate for the infringement . . . together with interest and costs as
5 fixed by the court.” The Supreme Court has instructed that pursuant to § 284, prejudgment
6 interest “should ordinarily be awarded” because it is “necessary to ensure that the patent owner is
7 placed in as good a position as he would have been in had the infringer entered into a reasonable
8 royalty agreement.” *General Motors Corp. v. Devex Corp.*, 461 U.S. 648, 655, 657 (1983).

9 Section 284 gives courts discretion to deny prejudgment interest if it finds “some justification for
10 withholding such an award.” *Id.* at 656–57. “For example, it may be appropriate to limit
11 prejudgment interest, or perhaps even deny it altogether, where the patent owner has been
12 responsible for undue delay in prosecuting the lawsuit.” *Id.* However, prejudgment interest may
13 be denied on the basis for undue delay only where the delay caused prejudice to the defendant.

14 *Lummus Indus., Inc. v. D.M. & E. Corp.*, 862 F.2d 267, 275 (Fed. Cir. 1988).

15 PI contends that Opticurrent is not entitled to an award of prejudgment interest because it
16 unduly delayed in filing this suit, Docket No. 307 at 1–2, pointing to Mr. Brunell’s testimony that
17 Opticurrent had determined PI was infringing the ’623 patent by 2014 but did not bring suit
18 against PI until 2016, Tr. at 440:20–441:11. However, a review of the case law suggests that this
19 delay is not so unreasonable that it precludes Opticurrent from recovering interest. In most cases
20 in which courts have refused to award prejudgment interest because of undue delay, the delay was
21 longer than the one-and-a-half-year period here, and there was some indication that the delay was
22 self-serving or a litigation tactic. *See, e.g., Crystal Semiconductor Corp. v. TriTech*
23 *Microelectronics Int’l, Inc.*, 246 F.3d 1336, 1362 (Fed. Cir. 2001) (two-year delay that appeared to
24 be a “litigation tactic” and “self-serving”); *Milwaukee Elec. Tool Corp. v. Snap-On Inc.*, 288 F.
25 Supp. 3d 872, 907 (E.D. Wis. 2017) (five-year delay resulting from plaintiffs’ “tactical decision”
26 to first “try[] out claims against the bigger industry players”); *Kaneka Corp. v. SKC Kolon PI,*
27 *Inc.*, 198 F. Supp. 3d 1089, 1124 (C.D. Cal. 2016) (four-year delay for which patentee “offer[ed]
28 no compelling explanation”).

1 In contrast, Mr. Brunell here explained that Opticurrent was not able to initiate legal
2 proceedings against PI immediately upon verifying infringement because it “had to wait until [it]
3 saved up enough money to afford what this fight would cost.” Tr. at 441:1–11. This rationale,
4 undisputed by PI, does not bespeak gamesmanship. Moreover, PI has not articulated any
5 particular prejudice it suffered due to Opticurrent’s delay, other than the generic accumulation of
6 damages that is present in most infringement cases. *See EcoServices, LLC v. Certified Aviation*
7 *Servs., LLC*, 340 F. Supp. 3d 1004, 1032 (C.D. Cal. 2018) (finding no undue delay where
8 defendant put forth no evidence that plaintiff’s delay was a litigation tactic or that defendant was
9 prejudiced in any way); *Hynix Semiconductor Inc. v. Rambus Inc.*, No. CV-00-20905 RMW, 2006
10 WL 2522506, at *3 (N.D. Cal. Aug. 30, 2006) (refusing to withhold interest absent a “showing
11 that the delays prejudiced [defendant] or that the delays were undue”). Opticurrent may thus
12 recover prejudgment interest.

13 a. Interest Rate

14 The Court must then determine what interest rate to apply. “Because there is no standard
15 rate for calculating prejudgment interest provided in the statute, the district court has ‘substantial
16 discretion’ to determine the interest rate in patent infringement cases.” *EcoServices*, 340 F. Supp.
17 3d at 1033 (quoting *Gyromat Corp. v. Champion Spark Plug Co.*, 735 F.2d 549, 556–57 (Fed. Cir.
18 1984)). “A court may use the prime rate, the prime rate plus a percentage, the United States
19 Treasury Bill (‘T-Bill’) rate, a state statutory rate, the corporate rate, or whatever rate the court
20 deems appropriate under the circumstances.” *Fujifilm Corp. v. Motorola Mobility LLC*, 182 F.
21 Supp. 3d 1014, 1042 (N.D. Cal. 2016) (citation and internal quotation marks omitted). Courts
22 have typically “conclude[d] that the prime rate is the most accurate estimate of the interest rate”
23 that the patentee would have charged the infringer for a loan, since that is “the rate charged by
24 banks to its most credit-worthy customers.” *Atmel Corp. v. Silicon Storage Tech., Inc.*, 202 F.
25 Supp. 2d 1096, 1101 (N.D. Cal. 2002). Opticurrent urges the Court to apply the higher California
26 statutory interest rate of seven percent. Docket No. 296 at 5. PI, on the other hand, argues that the
27 lower T-bill rate is appropriate. Docket No. 307 at 2.

28 Opticurrent has identified only one instance in which this district has awarded the

1 California statutory rate, and there, the plaintiff had demonstrated it “actually borrowed funds at a
2 higher rate [than the statutory rate] during the relevant time period.” *In re Hayes Microcomputer*
3 *Prod., Inc. Patent Litig.*, 766 F. Supp. 818, 824 (N.D. Cal. 1991), *aff’d*, 982 F.2d 1527 (Fed. Cir.
4 1992). Thus, it was appropriate for the court to award the statutory rate “in order to fully
5 compensate” the plaintiff. *Id.* Here, in contrast, Opticurrent has not produced any evidence that a
6 seven percent interest rate is necessary to make it whole, and so is not entitled to the statutory rate.

7 As for the choice between the prime rate and the T-bill rate, the law is inconsistent. Some
8 courts have held that the T-bill rate is the proper rate to award unless there is evidence that the
9 patentee borrowed money at a higher rate as a result of the defendant’s infringement. *See,*
10 *e.g.*, *Laitram Corp. v. NEC Corp.*, 115 F.3d 947, 955 (Fed. Cir. 1997); *Apple, Inc. v. Samsung*
11 *Elecs. Co.*, 67 F. Supp. 3d 1100, 1121–22 (N.D. Cal. 2014). Others have held that such evidence
12 is not necessary to support an award based on the prime rate. *See, e.g.*, *Uniroyal, Inc. v. Rudkin-*
13 *Wiley Corp.*, 939 F.2d 1540, 1545 (Fed. Cir. 1991); *Fujifilm Corp.*, 182 F. Supp. 3d at 1043. In
14 the absence of any compelling argument from either party for a higher or lower rate, the Court will
15 award the prime rate here as that would likely be the loan rate that PI, as a large corporation,
16 would be charged by a bank. *See Atmel Corp.*, 202 F. Supp. 2d at 1101.

17 b. Interest Period

18 The parties also dispute when the prejudgment interest began to accrue. Opticurrent
19 believes that it is entitled to interest dating back to 2006, the date of first infringement, shortly
20 after the ’623 patent issued. Docket No. 296 at 7. PI disagrees, arguing that Opticurrent’s
21 recovery for both damages and interest is limited by statute to the period starting in 2010, six years
22 before Opticurrent’s complaint was filed. Docket No. 307 at 4.

23 By statute, “no recovery shall be had for any infringement committed more than six years
24 prior to the filing of the complaint or counterclaim for infringement in the action.” 35 U.S.C.
25 § 286. Opticurrent initiated this action in 2016. Thus, once the jury found infringement, it
26 calculated Opticurrent’s damages for the period beginning in 2010, six years before this suit was
27 filed, rather than the period beginning in 2006, when the ’623 patent was issued and the
28 hypothetical royalty negotiation between the parties would have taken place. Opticurrent has

1 offered no reason why prejudgment interest should be calculated any differently. Indeed,
2 prejudgment interest by definition is interest on the “primary or actual” portion of a damages
3 award. *Beatrice Foods Co. v. New England Printing & Lithographing Co.*, 923 F.2d 1576, 1580
4 (Fed. Cir. 1991). It would make little sense to allow interest to start accruing before damages can
5 be imposed; the interest on zero damages would simply be zero.

6 Although appellate courts have yet to squarely address the issue, district courts that have
7 been urged by a prevailing plaintiff to award prejudgment interest stretching beyond the six-year
8 statutory limitations period have refused to do so. *See Trustees of Bos. Univ. v. Everlight Elecs. Co.*,
9 187 F. Supp. 3d 306, 322–23 (D. Mass. 2016); *Imperium IP Holdings (Cayman), Ltd. v. Samsung Elecs. Co.*,
10 No. 4:14-CV-00371, 2017 WL 1716589, at *4 (E.D. Tex. Apr. 27, 2017). In
11 particular, the court in *Trustees* highlighted the flaws in the exact argument Opticurrent makes
12 here—that the trigger date for awarding interest should be the date of the hypothetical negotiation.
13 The court explained that while the parties may have “stipulated to a hypothetical negotiation
14 taking place. . . on the eve of [the first] infringement,” that is not the same as an agreement as to
15 “when infringement for purposes of triggering damages actually began.” 187 F. Supp. 3d at 322.
16 To the contrary, the Federal Circuit has expressly instructed courts to be “careful to distinguish the
17 hypothetical negotiation date from other dates that trigger infringement liability.” *LaserDynamics*,
18 694 F.3d at 75. “For example, the six-year limitation on recovery of past damages under 35
19 U.S.C. § 286 does not preclude the hypothetical negotiation date from taking place on the date
20 infringement began, even if damages cannot be collected until some time later.” *Id.*

21 Opticurrent purports to have found two cases in which the Federal Circuit approved
22 prejudgment interest that extended beyond the six-year limitations period. Opticurrent is wrong
23 on both counts. In *Comcast IP Holdings I LLC v. Sprint Commc’ns Co., L.P.*, 850 F.3d 1302 (Fed.
24 Cir. 2017), the Federal Circuit affirmed the district court’s decision to award prejudgment interest
25 dating to 2006, the date of the hypothetical negotiation. *Id.* at 1315. But the complaint in that
26 case was filed in 2012, so 2006 was within the limitations period.⁸ And in *SSL Servs., LLC v.*
27

28 ⁸ Opticurrent quotes as support for its argument the language in *Comcast IP*’s that “[p]rejudgment interest runs from the earliest date of infringement for any patent issued at the time of the

1 *Citrix Sys., Inc.*, 769 F.3d 1073 (Fed. Cir. 2014), the Federal Circuit affirmed an award of
2 prejudgment interest calculated from 2004. *Id.* at 1094. However, that lawsuit was initiated in
3 2009, so again, 2004 was within the limitations period. *Id.*

4 Accordingly, prejudgment interest began to accrue in 2010, at the same time as damages.

5 c. Compounding

6 Opticurrent asks the Court to compound the prejudgment interest on a quarterly basis.
7 Docket No. 296 at 6. Determining the method of compounding interest is “largely within the
8 discretion of the district court.” *Rite-Hite Corp. v. Kelley Co.*, 56 F.3d 1538, 1555 (Fed. Cir.
9 1995). PI did not express any opposition to quarterly compounding. The Court will thus award
10 Opticurrent prejudgment interest at the prime rate, starting in 2010, compounded quarterly.

11 2. Postjudgment Interest

12 Finally, Opticurrent seeks postjudgment interest. Postjudgment interest is mandatory
13 under 28 U.S.C. § 1961, which provides that “interest shall be allowed on any money judgment in
14 a civil case recovered in a district court,” and “shall be calculated from the date of the entry of the
15 judgment, at a rate equal to the weekly average 1-year constant maturity Treasury yield, as
16 published by the Board of Governors of the Federal Reserve System, for the calendar week
17 preceding the date of the judgment.” PI does not dispute that Opticurrent is entitled to
18 postjudgment interest as provided in § 1961. Docket No. 307 at 5.

19 Accordingly, Opticurrent’s motion for prejudgment and postjudgment interest is
20 **GRANTED.**

21 F. Opticurrent’s Motion for Attorneys’ Fees

22 Opticurrent moves for attorneys’ fees and costs under 35 U.S.C. § 285, which authorizes
23 courts to award attorneys’ fees in “exceptional cases.” Opticurrent asserts that this is an

24 hypothetical negotiation.” 850 F.3d at 1315. However, as PI points out, the court made that
25 statement in the context of addressing a completely different question: whether prejudgment
26 interest should be apportioned where only one out of the three infringed patents had been issued at
27 the time of the first infringement. *See id.* at 1314–15. The Federal Circuit allowed interest on all
28 three patents to be calculated from the date of the first infringement, without apportionment, only
 because the jury had been informed that a hypothetical negotiation for the first patent “would have
 included the issuance of any later patent relating to the same technology.” *Id.* Thus, Opticurrent’s
 reliance on this out-of-context statement is misplaced.

1 “exceptional case” because PI: (1) willfully blinded itself to the possibility that its products
2 infringe the ’623 patent rather than conduct an adequate investigation into infringement; (2) hid a
3 key patent license during discovery; (3) opposed Opticurrent’s efforts to amend its infringement
4 contentions in bad faith; (4) misrepresented the nature of PI’s products in persuading the Court to
5 exclude them from the trial; (5) introduced improper invalidity arguments through its expert
6 report; (6) abandoned its invalidity contentions shortly before the start of trial; (7) refused to
7 produce updated sales figures; (8) delayed in exchanging pretrial materials; (9) included trial
8 exhibits it never intended to use at trial; (10) and engaged in ad hominem attacks. Docket No. 292
9 at 2–9.

10 1. Legal Standard

11 Section 285 of the Patent Act provides that “[t]he court in exceptional cases may award
12 reasonable attorney fees to the prevailing party.” An exceptional case is “one that stands out from
13 others with respect to the substantive strength of a party’s litigating position (considering both the
14 governing law and the facts of the case) or the unreasonable manner in which the case was
15 litigated.” *Octane Fitness, LLC v. ICON Health & Fitness, Inc.*, 572 U.S. 545, 554 (2014).
16 “District courts may determine whether a case is ‘exceptional’ in the case-by-case exercise of their
17 discretion, considering the totality of the circumstances.” *Id.* Relevant factors in assessing
18 whether a case is exceptional include “frivolousness, motivation, objective unreasonableness (both
19 in the factual and legal components of the case) and the need in particular circumstances to
20 advance considerations of compensation and deterrence.” *Id.* at 554 n.6. “[P]ost-*Octane* decisions
21 awarding fees have generally cited egregious behavior” as the basis for deeming a case
22 “exceptional.” *Vasudevan Software, Inc. v. Microstrategy, Inc.*, No. 11-CV-06637-RS, 2015 WL
23 4940635, at *5 (N.D. Cal. Aug. 19, 2015) (citing cases).

24 2. Analysis

25 Opticurrent asserts that PI litigated this case in an “unreasonable manner” per *Octane*.
26 However, none of the behavior cited by Opticurrent, considered in isolation or in the aggregate, is
27 egregious or exceptional.

28 Opticurrent first argues that PI conducted a “[s]ham [i]nvestigation” into the merits of the

1 suit and willfully blinded itself to the possibility that its products infringe the '623 patent. Docket
2 No. 292 at 2–3. However, as discussed in more detail above, in concluding that PI did not induce
3 infringement, the jury found that PI was not willfully blind as to the possibility of infringement.
4 *See Part II.B.2., supra.* PI's witnesses Mr. Walker and Mr. Kung both testified that they
5 determined after seeing the '623 patent that PI's products did not infringe. They explained the
6 bases for their determinations—that the accused products were four-terminal switches whereas the
7 '623 patent described a three-terminal switch, and the fourth terminal in the accused product was
8 connected to a power supply whereas Judge Gilstrap construed the '623 patent to cover switches
9 in which the fourth terminal was not connected to a power supply. Although the jury ultimately
10 decided that the accused products did infringe, its verdict of non-inducement reflects that it
11 credited PI's evidence that the infringement was not knowing or willful.

12 Second, Opticurrent asserts that PI did not disclose a patent license agreement between PI
13 and its subsidiary, Power Integrations International Ltd. (the "License"), even though Opticurrent
14 had made a Rule 30(b)(6) request for PI's patent licensing agreements. Docket No. 292 at 3–4. In
15 addition, Opticurrent represents that it asked Mr. Walker in his deposition "directly about existing
16 licenses to which Power Integrations was a party (including licenses that Power Integrations
17 believed were relevant and those it contends were not relevant), and he did not disclose the
18 existence of this License." *Id.* at 4. It was not until Opticurrent's counsel attended a trial in the
19 litigation between PI and Fairchild Semiconductor that Opticurrent became aware of the License.
20 *Id.*

21 Once Opticurrent became aware of the License, it moved the Court to compel PI to
22 produce it, to allow Opticurrent to supplement its expert report with information from the License,
23 and to issue sanctions for PI's non-disclosure. Docket No. 174 at 27–28. Judge Orrick denied all
24 three of Opticurrent's requests. He explained that he had already denied Opticurrent's previous
25 "request to compel production of certain damages-related documents arising from the *Fairchild*
26 litigation because the cases were unrelated, the experts were unrelated, they involved different
27 patents, and Opticurrent already had sufficient materials in the public record related to the case."
28 *Id.* at 28 (citing Docket No. 99). Judge Orrick determined that the License was encompassed in

1 that prior ruling because it was irrelevant to this litigation. *See id.* Moreover, he reminded
2 Opticurrent that its Rule 30(b)(6) request “only sought licenses that PI ‘contends are relevant to
3 the hypothetical negotiation,’” and therefore “continues to exclude” the newly-disclosed License.
4 *Id.* at 29. Accordingly, there was no basis to bring the License, much less sanction PI for
5 withholding it. This Court affirmed Judge Orrick’s ruling prior to trial, denying Opticurrent’s
6 attempt to use the License to establish a royalty rate here. *See* Docket No. 235 at 2 (finding “lack
7 of comparability” between the License and that which would have resulted from the hypothetical
8 negotiation between Opticurrent and PI).

9 In light of the above, Opticurrent is incorrect to claim that PI “hid” the licensing agreement
10 or otherwise acted inappropriately in not producing it.⁹

11 Third, Opticurrent argues that PI “vigorously opposed Plaintiff’s efforts to amend its
12 Infringement Contentions” despite having “no legitimate basis for doing so.” Docket No. 292 at

14
15
16
17
18

21
22
23
24
25
26
27
28

⁹ To the extent Opticurrent believes Mr. Walker was less than forthcoming in his deposition when asked about PI’s patent licenses, it is worth noting that Opticurrent’s questioning was ambiguous. Opticurrent maintains that the follow exchange shows that Mr. Walker’s concealed the License:

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

1 5–6. In Opticurrent’s telling, when it moved to amend its infringement contentions in May 2017,
2 it was merely trying to “update[] the information relating to conception and reduction to practice
3 [of the ’623 patent] that had already been produced and identified during discovery,” and was “not
4 seeking to provide a new conception date.” *Id.* at 5. Opticurrent alleges that PI opposed the
5 motion with “threats” to overhaul its own case in response to Opticurrent’s amendments. *Id.* at 6.

6 Opticurrent’s account of events is, at best, skewed. Although Judge Orrick ultimately
7 allowed Opticurrent to amend its infringement contentions, he observed that the need for
8 amendment arose because Opticurrent was “putting PI on notice of its ‘new’ conception date,”
9 which by Opticurrent’s own account was “critical because the earlier conception and reduction to
10 practice dates knock out at least one of defendants’ prior art references.” Docket No. 96 at 9.
11 Judge Orrick also underscored that the dispute was triggered by *Opticurrent’s* last-minute
12 production of documents, shortly before the close of fact discovery, indicating the Mr. Congdon
13 had conceived the ’623 patent in 1997, significantly earlier than the previously-asserted
14 conception date of 2001. *See id.* Before producing those documents, Opticurrent had informed PI
15 that “no documents pertaining to conception dates and reduction to practice exist because it was
16 not aware of an actual reduction to practice prior to the earliest effective filing date of the ’623
17 patent” in 2001. *Id.* Judge Orrick decided to allow the amendment only after granting PI a two-
18 month discovery extension to ameliorate the prejudice caused by Opticurrent’ amended
19 infringement contentions. *See id.* at 11–12.

20 Fourth, Opticurrent claims that PI’s “mischaracterizations about the accused product
21 families resulted in the exclusion of certain products” from this case. Docket No. 292 at 6. As
22 explained above, the Court excluded those products not because PI mischaracterized them, but
23 because Opticurrent did not alert PI that it was including them as accused products until mere days
24 before trial opened. *See Part II.C., supra.*

25 Fifth, Opticurrent contends that PI engaged in litigation misconduct when its technical
26 expert, William Bohannon, submitted a rebuttal report that improperly made a “practicing the
27 prior art” invalidity argument under the guise of providing noninfringement opinions. Docket No.
28 292 at 6–7. Judge Orrick granted Opticurrent’s *Daubert* motion to strike the relevant portion of

1 Mr. Bohannon's report, agreeing with Opticurrent that "Bohannon's prior art testimony . . .
2 ignores the Federal Circuit's clear directive that 'infringement is determined by construing the
3 claims and comparing them to the accused device, not by comparing the accused device to the
4 prior art.'" Docket No. 174 at 24–27 (quoting *Tate Access Floors v. Interface Architectural Res.*,
5 279 F.3d 1357, 1366 (Fed. Cir. 2002)). However, "[a]n exclusion of expert testimony
6 under *Daubert* does not in most cases trigger a finding of litigation misconduct" unless "the
7 circumstances are 'sufficiently egregious.'" *Digital Reg of Texas, LLC v. Adobe Sys., Inc.*, No. C
8 12-1971 CW, 2015 WL 1026226, at *2 (N.D. Cal. Mar. 9, 2015) (quoting *MarcTec v. Johnson &*
9 *Johnson*, 664 F.3d 907, 920 (Fed. Cir. 2012)). Judge Orrick did not indicate that Mr. Bohannon's
10 references to prior art were egregious or made in bad faith.

11 Sixth, Opticurrent argues that PI abruptly abandoned its invalidity contentions on the eve
12 of trial after contesting the validity of the '623 patent throughout the litigation, forcing Opticurrent
13 to spend unnecessary time and resources responding. Docket No. 292 at 7–8. But, as the Federal
14 Circuit has explained, withdrawing claims or defenses is not in itself litigation misconduct that
15 gives rise to attorneys' fees under § 285. "Claims . . . frequently are dropped and amended during
16 the course of a lawsuit," and "sound judicial policy encourages a narrowing of issues." *Union*
17 *Pac. Res. Co. v. Chesapeake Energy Corp.*, 236 F.3d 684, 694 (Fed. Cir. 2001). Opticurrent has
18 not shown that PI's decision to narrow the scope of the trial by not contesting validity was
19 "exceptional or vexatious as compared to normal litigation." *Id.*; see *Chrimar Holding Co., LLC*
20 *v. ALE USA Inc.*, 732 F. App'x 876, 891 (Fed. Cir. 2018) (affirming district court determination
21 that defendant's conduct in "press[ing] a large number of defenses and counterclaims for years,
22 only to drop most of them (e.g., . . . some invalidity grounds) late in the litigation, even during
23 trial" fell "within the range of ordinary practices involving the narrowing of claims for trial").

24 Opticurrent cites *Nilssen v. Osram Sylvania, Inc.*, 528 F.3d 1352 (Fed. Cir. 2008) as a case
25 in which the court deemed the withdrawal of claims before trial to be inequitable conduct under
26 § 285. There, however, the "exceptional case" determination was premised on the cumulative
27 effect of numerous instances of inequitable conduct: the appellants "provided incorrect responses
28 to interrogatories and never filed a formal correction, then attempted to exclude the interrogatories

1 for impeachment purposes because they were not signed; . . . [the inventor] arguably waived his
2 attorney-client privilege during trial without providing notice to [the appellee]; [and] appellants
3 produced documents near the end of trial that had been requested earlier.” *Id.* at 1358–59. And
4 the appellant in *Nilssen* did not merely drop one defense or counterclaim before trial; it “withdrew
5 sixteen of the originally-filed patents from their suit.” *Id.* at 1359. The circumstances evidencing
6 inequitable conduct in *Nilssen* are not present here.

7 Seventh, Opticurrent faults PI for “refus[ing] to supplement its damages related
8 documentation” in the weeks leading up to trial. Docket No. 292 at 8. Yet, Opticurrent’s own
9 characterization of the supposed dispute shows that PI provided the requested documentation once
10 it became available. When Opticurrent requested updated sales figures before trial, PI did not
11 provide them immediately because that it had not yet “closed its books.” *Id.* Once PI’s year-end
12 accounting process was completed in March, it produced the requested information. *Id.*
13 Opticurrent argues that PI updates its sales figures on a monthly basis and therefore could have
14 passed that information on to Opticurrent each month, but does not explain why that method of
15 production is preferable to a one-time production.

16 Eighth, Opticurrent asserts that PI did not provide all the pretrial materials on December
17 10, 2018, as it was required to. Docket No. 292 at 9. PI does not dispute that it did not turn over
18 some materials on December 10, but notes that it alerted Opticurrent that it would provide them by
19 December 12 and did, in fact, do so. *See* Docket No. 305-3 (email exchange between parties’
20 counsel). There is no evidence that the delay was the result of bad faith or that it prejudiced
21 Opticurrent, as the parties were able to file their pretrial submissions three days before the court-
22 ordered deadline. *See* Docket Nos. 170–73. PI’s conduct was not egregious.

23 Ninth, Opticurrent protests that PI “insisted on the inclusion of hundreds of trial exhibits,”
24 of which many were not ultimately introduced at trial. Docket No. 292 at 9. It is perfectly routine
25 for parties to selectively introduce exhibits at trial depending on evolving trial strategies, issues
26 that are raised or not raised during trial, evidentiary objections, and other considerations.
27 Opticurrent certainly did not introduce all the exhibits on its exhibits list and does not cite any
28 authority for the proposition that it is unreasonable for a litigant to not introduce every piece of

1 evidence on its exhibit list.

2 Finally, Opticurrent complains that PI has engaged in “[c]onstant ad hominem attacks and
3 unnecessarily heated rhetoric” throughout this litigation. Docket No. 292 at 9–10. The ostensibly
4 supporting examples Opticurrent cites, however, do not contain any language that could be
5 construed as ad hominem or unreasonably heated. Opticurrent merely lists filings PI has made in
6 support of motions that ended up being denied. *See id.* (listing PI’s claim construction brief,
7 opposition to Opticurrent’s motion to amend infringement contentions, and two case management
8 statements in which PI stated its position that Opticurrent’s infringement contentions are
9 meritless).

10 As the Supreme Court has stressed, the fee-shifting statute that was the precursor to § 285
11 did not contemplate the award of fees “as a penalty for failure to win a patent infringement suit.”
12 *Octane Fitness*, 572 U.S. at 548–49 (noting that § 285 “did not substantively alter the meaning of
13 the [precursor] statute”). Thus, “the mere fact that [PI] moved” for relief of various forms “during
14 the course of this litigation—and that the court ruled in [Opticurrent’s] favor each time—does not
15 suggest exceptional circumstances.” *Adaptix, Inc. v. Apple, Inc.*, No. 5:13-CV-01776-PSG, 2015
16 WL 5158716, at *2–4 (N.D. Cal. Sept. 2, 2015) (denying fees under § 285 where the losing
17 party’s position “was not entirely unreasonabl[e]” and not “based on anything but a good faith
18 belief”); *see TVIIM, LLC v. McAfee, Inc.*, No. 13-CV-04545-HSG, 2016 WL 74637, at *7 (N.D.
19 Cal. Jan. 7, 2016) (“But the fact that Plaintiff lost on both its infringement and invalidity
20 arguments cannot, by itself, justify a fees award.”).

21 3. Conclusion

22 A case, like this one, that has been “hard fought and zealously litigated” inevitably sees
23 “various disputes between the parties,” but Opticurrent “has failed to identify any conduct by [PI]
24 that would rise to the level of misconduct necessary to find this an ‘exceptional case’ and award
25 attorneys’ fees under Section 285.” *Finjan, Inc. v. Sophos, Inc.*, 244 F. Supp. 3d 1016, 1029 (N.D.
26 Cal. 2017). Accordingly, Opticurrent’s motion for attorneys’ fees is **DENIED**.

27 G. PI’s Motion to Stay Execution of Judgment Pending Appeal

28 Under Federal Rule of Civil Procedure 62(b), “[a]t any time after judgment is entered, a

1 party may obtain a stay by providing a bond or other security.” A supersedeas bond ensures that
2 the appellee will be able to collect the judgment plus interest should the court of appeals affirm the
3 judgment. *See Rachel v. Banana Republic, Inc.*, 831 F.2d 1503, 1505 n.1 (9th Cir. 1987). When a
4 party posts a supersedeas bond with the district court in compliance with Rule 62(b), “it [is]
5 entitled to a stay as a matter of right.” *Bennett v. Franklin Res., Inc.*, 360 F. Supp. 3d 972, 977
6 (N.D. Cal. 2018) (quoting *American Civil Liberties Union of Nevada v. Masto*, 670 F.3d 1046,
7 1066 (9th Cir. 2012)) (alteration in original). If no bond is posted, “the grant or denial of [a] stay[]
8 [i]s a matter strictly within the judge’s discretion.” *Matter of Combined Metals Reduction Co.*,
9 557 F.2d 179, 193 (9th Cir. 1977). “The appellant has the burden to ‘objectively demonstrate’ the
10 reasons for departing from the usual requirement of a full supersedeas bond.” *Cotton ex rel.
McClure v. City of Eureka, Cal.*, 860 F. Supp. 2d 999, 1028 (N.D. Cal. 2012) (quoting *Poplar
Grove Planting & Refining Co., Inc. v. Bache Halsey Stuart, Inc.*, 600 F.2d 1189, 1191 (5th Cir.
11 1979)).

12 Here, PI asks the Court to enter a stay pending appeal without requiring a supersedeas
13 bond. Instead, PI proposes that it will provide “other security” in the form of quarterly financial
14 updates to demonstrate its continued ability to pay the judgment and a representation that PI will
15 “pay any judgment within 30 days of the Federal Circuit issuing its mandate.” Docket No. 313 at
16 4. Opticurrent objects, and instead requests that the Court “require Power Integrations to get a
17 letter of credit to secure the judgment on its behalf.” Docket No. 322 at 1.

18 In *Dillon v. City of Chicago*, 866 F.2d 902, 904 (7th Cir. 1988), the Seventh Circuit
19 articulated five factors to guide courts in exercising their discretion regarding whether to waive the
20 bond requirement. “Courts in the Ninth Circuit regularly use the *Dillon* factors in determining
21 whether to waive the bond requirement.” *Kranson v. Fed. Express Corp.*, No. 11-CV-05826-
22 YGR, 2013 WL 6872495, at *1 (N.D. Cal. Dec. 31, 2013) (citing *Cotton*, 860 F. Supp. 2d at
23 1028). The *Dillon* factors are: (1) the complexity of the collection process; (2) the amount of time
24 required to obtain a judgment after it is affirmed on appeal; (3) the degree of confidence that the
25 district court has in the availability of funds to pay the judgment; (4) whether the defendant’s
26 ability to pay the judgment is so plain that the cost of a bond would be a waste of money; and (5)
27
28

1 whether the defendant is in such a precarious financial situation that the requirement to post a
2 bond would place other creditors of the defendant in an insecure position. *Dillon*, 866 F.2d at
3 904–05.

4 PI argues that it should not be required to post bond because it satisfies all of the *Dillon*
5 factors. According to PI, the third through fifth factors are met because the judgment in this case
6 is small relative to PI’s assets—its latest SEC Form 10K indicates that PI had net revenues of \$416
7 million, shareholders’ equity of \$527 million, and cash-on-hand of \$134 million. Docket No. 313,
8 Exh. A at 21. Further, PI believes its assurance that it will pay any judgment within 30 days of an
9 appellate mandate satisfy the first and second factors. Opticurrent argues, on the other hand, that
10 PI’s size is no guarantee of solvency, and indeed that PI has acknowledged in its SEC filings that
11 it is in patent litigation against a competitor, Fairchild Semiconductor, and there is a possibility
12 that PI “may be required to pay substantial damages, stop our manufacture, use, sale, or
13 importation of infringing products, or obtain licenses” if it loses the case. Docket No. 322, Exh. 2
14 at 15. Opticurrent further contends that PI’s “conclusory statements about agreeing to pay within
15 30 days are not enough to carry its burden” on the first two *Dillon* factors. *Id.* at 3.

16 Courts have accepted the type of security PI proposes in lieu of supersedeas bond. In
17 *Kranson v. Fed. Express Corp.*, No. 11-CV-05826-YGR, 2013 WL 6872495 (N.D. Cal. Dec. 31,
18 2013), the court waived the bond requirement in light of the defendant’s plain ability to pay the
19 judgment and its counsel’s attestation that “once a completed payment request is submitted, it
20 takes less than 30 days . . . to issue payment.” *Id.* at *1–2. In *Am. Color Graphics, Inc. v.*
21 *Travelers Prop. Cas. Ins. Co.*, No. C 04-3518 SBA, 2007 WL 1520952 (N.D. Cal. May 23, 2007),
22 the court allowed the defendant to “submit copies of its quarterly and annual financial statements
23 to [plaintiff] and the Court while the appeal is pending” in lieu of a bond. *Id.* at *2. However, the
24 circumstances in this case are somewhat different. Unlike in *Kranson*, PI’s ability to pay the
25 judgment is not beyond question given the risks attendant to its litigation with Fairchild
26 Semiconductor. Unlike in *American Color*, where the plaintiff consented to the defendant’s
27 alternative form of security, Opticurrent opposes PI’s request here. *Am. Color Graphics*, 2007
28 WL 1520952, at *2.

1 Accordingly, the Court finds that PI has not met its burden to demonstrate that the usual
2 requirement of a full supersedeas bond is not warranted. *Cotton*, 860 F. Supp. 2d at 1028. PI's
3 motion the stay execution of the judgment pending appeal is **DENIED**. To stay execution of the
4 judgment pending appeal, PI must file a supersedeas bond equal to 125% of Opticurrent's
5 \$1,199,967.26 award, *i.e.*, \$1,499,959.08. *See id.* at 1029 ("[A] bond of 1.25 to 1.5 times the
6 judgment is typically required.") (citation omitted).

III. CONCLUSION

For the foregoing reasons, PI's motion for judgment as a matter of law is **GRANTED** as to the royalty base and **DENIED** otherwise; Opticurrent's motions for judgment on induced infringement and on the Excluded Products are **DENIED**; Opticurrent's motions for ongoing royalty and for prejudgment and postjudgment interest are **GRANTED**; Opticurrent's motion for attorneys' fees is **DENIED**; and PI's motion to stay execution of judgment pending appeal is **DENIED**.

This order disposes of Docket Nos. 292, 295, 296, 298, 303, 309, and 313.

IT IS SO ORDERED.

Dated: June 5, 2019

EDWARD M. CHEN
United States District Judge

UNITED STATES DISTRICT COURT
NORTHERN DISTRICT OF CALIFORNIA

OPTICURRENT, LLC,
Plaintiff,
v.

POWER INTEGRATIONS, INC., et al.,
Defendants.

Case No. [17-cv-03597-EMC](#)

FINAL JUDGMENT

It is ORDERED and ADJUDGED that judgment be entered in favor of Plaintiff and against Defendant on Plaintiff's claims of direct infringement of claim 1 of the '623 patent, both literally and under the doctrine of equivalents, by the following products: TinySwitch-III (TNY274, TNY275, TNY276, TNY277, TNY278, TNY279, TNY280); TinySwitch-LT (TNY174, TNY175, TNY176, TNY177, TNY178, TNY179, TNY180); LinkSwitch-II (LNK603, LNK604, LNK605, LNK606, LNK613, LNK614, LNK615, LNK616, LNK632; and LinkZero-AX (LNK584, LNK585, and LNK586).

It is ORDERED and ADJUDGED that judgment be entered in favor of Defendant and against Plaintiff on Plaintiff's claim of induced infringement of claim 1 of the '623 patent.

It is ORDERED and ADJUDGED that Defendant's counterclaim of invalidity is hereby dismissed without prejudice.

It is ORDERED and ADJUDGED that judgment be entered in favor of Plaintiff for damages in the amount of \$1,199,927.26 for direct infringement through March 31, 2018.

It is ORDERED and ADJUDGED that Defendant shall pay pre-judgment interest in the amount of \$281,743, plus \$223.27 per day from June 20, 2019 through judgment.

It is ORDERED and ADJUDGED that Defendant shall be taxed costs of \$21,799.03.

It is ORDERED and ADJUDGED that execution of this judgment will be stayed, pending appeal, upon the filing of a supersedeas bond equal to 125% of Opticurrent's damages award of \$1,119,967.26 (*i.e.*, \$1,499,959.08) or the posting of other security agreed to by the parties.

It is ORDERED and ADJUDGED that Defendant shall pay Plaintiff post-judgment interest in the amount statutorily required by 28 U.S.C. § 1961.

It is ORDERED and ADJUDGED that Defendant shall pay Plaintiff, on a quarterly basis, an ongoing royalty of 3.5% of revenues for ongoing sales made by Defendant directly into the United States of the infringing products listed above.
